Statistical analysis was performed using SPSS software for Windows (version 16.0, SPSS Inc., Cary, NC, USA). Data were analysed using a two-way ANOVA with treatment and sex as the independent variables. When a significant interaction was found, the data were analysed using a one-way ANOVA with treatment as the independent variable. When a significant difference was found, the data were analysed using a *t*-test. The level of significance was set at  $P < 0.05$ .

These results suggest that the model is not only able to capture the main features of the data, but also to provide a good approximation of the true underlying process.
