

about this line?

It always runs perpendicular to the main axis.

Activity A:

Real and virtual images

Get the Gizmo ready:

- Turn on the **Parallel line**, **Central line**, and **Line through focal point**.
- Move the candle to -24 on the central axis, with the focal point at -12.

Introduction: A convex lens is called a "converging lens" because it focuses light rays into a point. A **real image** is formed where the light rays emitted from a point converge on the other side of the lens. If you placed a sheet of paper at the image, a focused image would be projected onto the paper.

Question: How do lenses create images?

1. **Observe:** In its current configuration, the distance from the candle to the focal point is 12 units and the distance from the focal point to the lens is also 12 units.

A. What do you notice about the orientation of the candle's image on the right side of the lens?

It is flipped.

B. What do you notice about the size of the image?

The picture is a little bit smaller.

2. **Investigate:** Complete each action listed in the table below, and describe how that action affects the image to the right of the lens. Return the candle and focal point to their original positions (-24 for the candle, -12 for the focal point) after each action.

Action	Effect on image
Move the candle to the left.	Image gets smaller and moves toward the lens.
Move the candle to the right.	Image gets bigger and moves away from the lens.
Move the left focal point to the left.	Image gets bigger and moves away from the lens.
Move the left focal point to the right.	Image gets smaller and moves toward the lens.

3. **Analyze:** How is the image size related to the distance between the candle and the focal point?

The image shrinks and travels closer to the lens as the distance between the candle and the focal point grows, and the opposite is also true.
