Heafner, Laura K. Handler, Tracy C. Rock, 2021-01-01 Globalization modernization and technologization have brought rapid social and economic change while also increasing diversity of democratic societies Plurality of democracy once viewed as a progressive ideology has been met by the movement of identity politics to the margins of society Although social movements demanding recognition on the part of groups that were once invisible to mainstream society have brought attention to systemic inequities prejudice and discriminatory policies other groups feeling a loss of status and a sense of displacement have pushed back with counterclaims and protests These conflicting narratives have fractured society and segmented the populace along narrowly defined identities creating a new era of democracy and isolationism Today in the United States we see the troubling effects of increasingly polarized political discourse amplified gridlock within government the politicization and fragmentation of economic and social life and the suppression of the spread of information across ideological lines The socio political climate in America is characterized by skepticism hostility distrust claims of fake news and unwavering opposition The divide

within our nation has shifted the narrative of democracy from promoting the common good to protecting the interests of likeminded factions and the preservation of power and privilege In recent decades researchers focused attention on studying the social geographic political and technological polarization in the United States Trends manifest in myriad ways both in politics and in everyday life and expose the divergence between urban and rural communities These inquiries also suggest that causes and effects of identity politics and polarization are too complex to be studied within the confines of a single discipline Its exploration therefore requires participation and collaboration from scholars in many different fields particularly those working in the social sciences In this edited volume we seek to leverage this research capacity to engage the reader in studies and instruction concerning the divide within and the intersections of realities facts theories and practices in social science education Download a sample article Teaching to a Statue Wade H Morris Georgia State University Chara Haessler Bohan Georgia State University

Moving Forward in the Study of Temperament and Early Education Outcomes Cynthia L. Smith, David J. Bridgett, 2020-06-29 This book furthers understanding of how child temperament is linked to educational outcomes through mediating and moderating factors As the importance of socio emotional development for educational outcomes is increasingly recognized understanding the influence that children s temperament which includes their emotional reactivity and regulation of emotions cognitions and behaviors can have on educational factors such as school readiness and academic achievement is crucial First the chapters in this book examine pathways connecting temperament with educational

outcomes for example one study reports that toddler negative affect predicted executive functioning which then predicted achievement at age six The second way that chapters in this book examine links between temperament and education is by identifying factors that make associations between temperament and educational outcomes more salient for example findings from one study show that shyness and negative emotion were more strongly associated with lower academic achievement only when children received fewer than nine hours of sleep each night highlighting the importance of sleep By examining pathways through which temperament exerts effects on educational outcomes i e mediators or factors that modify associations between temperament and educational outcomes i e moderators the potential for interventions aimed at improving early educational outcomes can be fully realized This book was originally published as a special issue of Early Education and Development *Advanced Test Reactor* J. to clinical practice: Novel Strategies for Discovery and Validation of Biomarkers for Brain Injury Stefania Mondello, Ronald L Hayes,András Büki, Frank C Tortella, Kevin K W Wang,2015-02-25 Traumatic brain injury TBI is a major cause of death and disability and one of the greatest unmet needs in medicine and public health TBI not only has devastating effects on patients and their relatives but results in huge direct and indirect costs to society Although guidelines for the management of patients have been developed and more than 200 clinical trials have been conducted they have resulted in few improvements in clinical outcomes and no effective therapies approved for TBI It is now apparent that the heterogeneity of clinical TBI is underlain by molecular phenotypes more complex and interactive than initially conceived and current approaches to the characterization management and outcome prediction of TBI are antiquated unidimensional and inadequate to capture the interindividual pathophysiological heterogeneity Recent advances in proteomics and biomarker development provide unparalleled opportunities for unraveling substantial injury specific and patient specific variability and refining disease characterization The identification of novel sensitive objective tools referred to as biomarkers can revolutionize pathophysiological insights enable targeted therapies and personalized approaches to clinical management In this Research Topic we present novel approaches that provide an infrastructure for discovery and validation of new biomarkers of acute brain injury These techniques include refined mass spectrometry technology and high throughput immunoblot techniques Output from these approaches can identify potential candidate biomarkers employing systems biology and data mining methods In this Research Topic we present novel approaches that provide an infrastructure for discovery and validation of new biomarkers of acute brain injury These techniques include refined mass spectrometry technology and high throughput immunoblot techniques Output from these approaches can identify potential candidate biomarkers employing systems biology and data mining methods Finally suggestions are provided for the way forward with an emphasis on need for a multidimensional approach that integrate a panel of pathobiologically diverse biomarkers with clinical variables and imaging based assessments to improve diagnosis and classification of TBI and to develop best clinical
