

PROBLEM-SOLVING

DEFINITION

Problem-solving is a cognitive process used to identify, analyze, and resolve challenges or obstacles. It involves evaluating various solutions and selecting the most suitable one based on the given criteria. Effective problem-solving requires critical thinking, creativity, and the ability to apply different strategies and techniques.

EXAMPLES

- **Five Whys:** The Five Whys method is a problem-solving technique that involves asking "why" five times to drill down into the root cause of an issue.
- **Pro-Con Analysis:** A pro-con analysis helps in weighing the advantages and disadvantages of a decision, facilitating more informed and balanced choices.

Macrocognition in Teams Michael P. Letsky, Norman W. Warner, Stephen M. Fiore, C.A.P. Smith, 2017-09-18. Team collaboration involves many operational tasks such as team decision making or course of action selection, developing shared understanding and intelligence analysis. These operational tasks must be performed in many situations, often under severe time pressure with information and knowledge uncertainty, large amounts of dynamic information, and across different team characteristics. Recent research in this area has focused on various aspects of human collaborative decision making and the underlying cognitive processes while describing those processes at different levels of detail, making it difficult to compare research results. The theoretical construct of macrocognition in teams was developed to facilitate cognitive research in team collaboration, which will enable a common level of understanding when defining, measuring, and discussing the cognitive processes in team collaboration. Macrocognition is defined as both the internalized and externalized mental processes employed by team members in complex, one-of-a-kind collaborative problem solving. Macrocognition in Teams provides readers with a greater understanding of the macrocognitive processes which support collaborative team activity, showcasing current research, theories, methodologies, and tools. It will be of direct relevance to academics, researchers, and practitioners interested in group/team interaction, performance, development, and training.
