Research Product - U.S. Army Research Institute for the Behavioral and Social Sciences ,1998 The Archaeologist's Manual for Conservation Bradley A. Rodgers,2007-05-08 This is a Foreword by an archaeologist not a conservator but as Brad Rodgers says Conservation has been steadily pulled from archaeology by the forces of specialization p 3 and he wants to remedy that situation through this manual He sees this work as a call to action for the non professional conservator permitting curators conservators and archaeologists to identify artifacts that need professional attention and allow these professionals to stabilize most artifacts in their own laboratories with minimal intervention using simple non toxic procedures p 5 It is the mission of Brad's manual to bring conservation back into archaeology p 6 The degree of success of that goal depends on the degree to which archaeologists pay attention to and put to use what Brad has to say because as he says The conservationist archaeologist is responsible to make preparation for an artifact's care even before it is excavated and after its storage into the foreseeable future a tremendous responsibility p 10 The manual is a combination of highly technical as well as common sense methods of conserving wood iron and other metals ceramics glass and stone organics and composites a far better guide to artifact conservation than was available to me when I first faced that archaeological challenge at colonial Brunswick Town North Carolina in 1958 a challenge still being faced by archaeologists today The stage of conservation in 1958 is in dramatic contrast to the procedures Brad describes in this manual conservation has indeed made great progress For instance a common procedure then was to heat the artifacts red hot in a furnace a method that made me cringe **Recent Advances in Ambient Assisted Living - Bridging Assistive Technologies, E-Health and Personalized Health Care** W. Recent events have reminded us that any collection or service may be at risk and libraries and archives must have prevention and recovery measures in place. Written by academics and practitioners drawing on firsthand experience and research worldwide including Australia, Scandinavia and the USA, *Disaster Management for Libraries and Archives* reviews and explains the importance and scope of disaster management planning and what can be done before, during and after incidents. The book begins by explaining how to develop a disaster control plan, outlining the different phases from prevention to recovery and goes on to provide guidance on risk assessment and management methods which should underpin disaster planning. Individual chapters then focus on fire and flooding, bringing together lessons learned from recent disasters in the UK with case study material including information on prevention systems and reaction and recovery measures. A chapter on cooperative projects in the USA follows, providing examples of how collaborative partnerships and networks can be organized so that help, expertise and resources can be shared to facilitate management of disasters. The effect on people, both employees and users, must never be overlooked; this is the emphasis of the second half of the book. Research on the impact of a major library fire in Sweden forms the basis of the next chapter, which explains how the psychological impact of disasters on both staff and the local community can be managed. The following chapter describes the devastating effects on cultural institutions and their staff of war in Croatia in the early 1990s and extraordinary achievements against the odds. Ways of maintaining immediate temporary service continuity along with planning for long term restoration of services are exemplified by a case study of the fire at the Central Library of Norwich. *Disaster Management for Libraries and Archives* offers advice and insight for managers beginning to work on or reviewing disaster management within their organizations. The accounts of actual events highlight the real life challenges faced and the effectiveness of appropriate solutions, while the guide to information sources at the end of the book signposts readers to a wealth of other useful material.

Museum Lighting David Saunders, 2021-01-12 This indispensable guide to museum lighting, written by distinguished conservation scientist David Saunders, is the first new volume of its kind in over thirty years. Author David Saunders, former keeper of conservation and scientific research at the British Museum, explores how to balance the conflicting goals of visibility and preservation under a variety of conditions. Beginning with the science of how light, color and vision function and interact, he proceeds to offer detailed studies of the impact of light on a wide range of objects, including paintings, manuscripts, textiles, bone, leather and plastics. With analyses of the effects of light on visibility and deterioration, *Museum Lighting* provides practical information to assist curators, conservators and other museum professionals in making critical decisions about the display and preservation of objects in their collections.
