dementia is Alzheimer's disease. No medication or supplement can delay or stop the progression of the disease because treating a patient once clinical symptoms have emerged is too late. Recent medical research offers us hope. Based on research from multiple specialties, Dr. Lisa Mosconi shows that lifestyle interventions such as dietary choices, weight modification, and physical activity could prevent Alzheimer's, minimize cognitive decline, improve memory, and maximize brain power. As the most active organ of the body, the brain has nutritional needs ten times higher than other organs. Most people's brains are underperforming because they are undernourished. In *Brain Food*, Dr. Mosconi explains how food affects our cognitive health and offers a complete food plan for optimal brain nourishment. Eating for your brain not only helps you prevent cognitive decline but also helps you increase brain vitality, improve memory, cognition, and work performance.
