2017 putting immense strain on existing energy sources. If current growth rates persist, these sources could be depleted within a mere 130 years. To address this impending crisis, governments worldwide have implemented regulations and incentives to promote energy conservation. While numerous studies and publications have emerged within the field of energy management, there remains a significant research gap, particularly concerning the energy challenges faced by developing countries. Existing edited books on energy-related topics often narrowly focus on specific aspects, hindering readers from gaining a holistic understanding of energy management challenges and potential solutions. This book fills this void. Recognizing the pivotal role these nations play in achieving sustainable development goals, this book provides a wide-ranging perspective on the trends, challenges, and potential solutions to energy crises in these regions. It not only acknowledges the challenges faced by developing countries but also offers viable strategies to address them. The editor, leveraging his successful leadership experience in global academic endeavors, including publishing a book on Occupational Safety Health practices during the COVID-19 era and coordination of multinational research projects, is well-positioned to bring together exceptional chapters from various countries. His extensive network ensures the inclusion of diverse perspectives, enriching the book's content and offering invaluable insights to readers. Designed for a broad readership, including energy industry organizations, professionals, researchers, government bodies, policymakers, and students, this book delves into a wide array of energy management issues. By facilitating a comprehensive understanding of the subject, it equips readers with the knowledge and tools necessary to navigate the complex landscape of energy management in the modern world.
