EBOOK: Vector Mechanics for Engineers: Statics (SI units) Ferdinand Beer, E. Johnston, David Mazurek, 2012-10-16

**Target Audience** This text is designed for the first course in Statics offered in the sophomore year.

**Overview** The main objective of a first course in mechanics should be to develop in the engineering student the ability to analyze any problem in a simple and logical manner and to apply to its solution a few well understood basic principles. This text is designed to help the instructor achieve this goal. Vector analysis is introduced early in the text and is used in the presentation and discussion of the fundamental principles of mechanics. Vector methods are also used to solve many problems, particularly three dimensional problems where these techniques result in a simpler and more concise solution. The emphasis in this text however remains on the correct understanding of the principles of mechanics and on their application to the solution of engineering problems and vector analysis is presented chiefly as a convenient tool. In order to achieve the goal of being able to analyze mechanics problems the text employs the following pedagogical strategy. Practical applications are introduced early. New concepts are introduced simply. Fundamental principles are placed in simple contexts. Students are given extensive practice through sample problems, special sections entitled Solving Problems on Your Own, extensive homework problem sets, review problems at the end of each chapter, and computer problems designed to be solved with computational software.

**Resources Supporting This Textbook** Instructor's and Solutions Manual features typeset one per page solutions to the end of chapter problems. It also features a number of tables designed to assist instructors in creating a schedule of assignments for their course. The various topics covered in the text have been listed in Table I and a suggested number of periods to be spent on each topic has been indicated. Table II prepares a brief description of all groups of problems. Sample lesson schedules are shown in Tables III, IV, and V together with various alternative lists of assigned homework problems. McGraw Hill Connect Engineering, a web based assignment and assessment platform, is available at <http://www.mhhe.com/beerjohnston> and includes algorithmic problems from the text, Lecture PowerPoints, an image bank, and animations. Hands on Mechanics is a website designed for instructors who are interested in incorporating three dimensional hands on teaching aids into their lectures. Developed through a partnership between the McGraw Hill Engineering Team and the Department of Civil and Mechanical Engineering at the United States Military Academy at West Point, this website not only provides detailed instructions for how to build 3 D teaching tools using materials found in any lab or local hardware store but also provides a community where educators can share ideas, trade best practices, and submit their own original demonstrations for posting on the site. Agricultural Adaptation to Climate Change Christopher R. Bryant, Mamadou A. Sarr, Kénel Délusca, 2016-08-26 This book deals with one of the major challenges facing human society and its governments climate change and variability The principal objective of the book is to explore how agricultural production through the actions primarily of farmers including peasant farmers adapt to these changing circumstances what the limitations of adaptation are how the process of adaptation varies between different territories e g developed countries versus developing countries and what are or can be the most effective roles for actors other than the farmers including different levels of government and non governmental organizations NGOs such as professional associations of farmers and community organizations The principal argument is threefold 1 while there are significant differences between territories and countries in terms of the capacity of farmers and the other actors to engage in capacity building to be able to adapt effectively to climate change and variability 2 the critical roles are those played out by the farmers themselves but that 3 other actors can play an important role in accompanying farmers in their adaptation process providing relevant and strategic information counseling them and facilitating networking and meetings when appropriate This effectively means that without engaging in the local adaptation processes governments can really only play effective roles by working with other actors at the local and regional levels When it occurs it can be very effective but when it does not farmers are left to their own devices and even then many are able to use their own creativity and local knowledge to survive and continue to develop Essentially therefore the secondary argument that is followed throughout the book is that adaptation is essentially a social process that requires an understanding of social processes and dynamics in each farming community and territory It involves an understanding for instance of information diffusion processes in the different farming communities and territories which provides a set of tools to promote and facilitate the adoption process in the context of adaptation to climate change and variability
