Post Treatments of Anaerobically Treated Effluents Vinay Kumar Tyagi,Abid Ali Khan,Ng Wun Jern,Anwar Khursheed,A. A. Kazmi,2019-06-15 The anaerobic process is considered to be a sustainable technology for organic waste treatment mainly due to its lower energy consumption and production of residual solids coupled with the prospect of energy recovery from the biogas generated However the anaerobic process cannot be seen as providing the complete solution as its treated effluents would typically not meet the desired discharge limits in terms of residual carbon nutrients and pathogens This has given impetus to subsequent post treatment in order to meet the environmental legislations and protect the receiving water bodies and environment This book discusses anaerobic treatment from the perspective of organic wastes and wastewaters municipal and industrial followed by various post treatment options for anaerobic effluent polishing and resource recovery Coverage will also be from the perspective of future trends and thoughts on anaerobic technologies being able to support meeting the increasingly stringent disposal standards The resource recovery angle is particularly interesting as this can arguably help achieve the circular economy It is intended the information can be used to identify appropriate solutions for anaerobic effluent treatment and possible alternative approaches to the commonly applied post treatment techniques The succeeding discussion is intended to lead on to identification of opportunities for further research and development This book can be used as a standard reference book and textbook in universities for Master and Doctoral students The academic community relevant to the subject namely faculty researchers scientists and practicing engineers will find the book both informative and as a useful source of successful case studies
