

## Genetics Practice Problems: Pedigree Tables

Remember the following when working pedigree tables:

[1] Circles are females and squares are males.

[2] A shaded circle or square indicates that a person has the trait.

The pedigree seen below is the inheritance of a trait. Shaded individuals are affected. First, determine the probable genotype of person 1 - 15. Then answer the questions below the table.

What do you know about the genotype of the mother of II?

These parents (1) had an affected son (2). His dad is unknown, but affected. Since from his mother, since the mother is not shaded, she must be a carrier.

Number 3 is unaffected, just like her father. Where could she get her allele for color blindness?

She inherited her allele for color blindness from her mother. Must have been that if color blindness from her father.

Number numbers 11 and 12 were affected. How did they have a child (13)?

Both mother and father are carriers for color blindness.

What must be the genotype of the parents of a non-affected daughter (14)?

To have an unaffected daughter, she must have to inherit the unaffected allele from each parent. Her father must be  $X^N Y$  and mother must have to be  $X^N X^n$ .

If number 11 has a normal son, what is the probability that their son will be unaffected?

$X^N X^n \times X^N Y \rightarrow$  all of their sons will be unaffected.

(11) (normal male)
