Introduction to Coding Theory and Algebraic Geometry J. van Lint,G. van der Geer,2012-12-06 These notes are based on lectures given in the semmar on Coding Theory and Algebraic Geometry held at Schloss Mickeln Diisseldorf November 16 21 1987 In 1982 Tsfasman Vladut and Zink using algebraic geometry and ideas of Goppa constructed a seqeunce of codes that exceed the Gilbert Varshamov bound The result was considered sensational Furthermore it was surprising to see these unrelated areas of mathematics collaborating The aim of this course is to give an introduction to coding theory and to sketch the ideas of algebraic geometry that led to the new result Finally a number of applications of these methods of algebraic geometry to coding theory are given Since this is a new area there are presently no references where one can find a more extensive treatment of all the material However both for algebraic geometry and for coding theory excellent textbooks are available The combination ofthe two subjects can only be found in a number ofsurvey papers A book by C Moreno with a complete treatment of this area is in preparation We hope that these notes will stimulate further research and collaboration of algebraic geometers and coding theorists G van der Geer J H van Lint Introduction to CodingTheory and Algebraic Geometry PartI CodingTheory Jacobus H vanLint 11 1 Finite fields In this chapter we collect without proof the facts from the theory of finite fields that we shall need in this course *Functions of a Complex Variable* Edgar Jerome Townsend,1915 *Theory of Linear Physical Systems* Ernst A. Guillemin,2013-05-22 An eminent electrical engineer and authority on linear system theory presents this advanced treatise which approaches the subject from the viewpoint of classical dynamics and covers Fourier methods This volume will assist upper level undergraduates and graduate students in moving from introductory courses toward an understanding of advanced network synthesis 1963 edition

Functions of a Real Variable N. Bourbaki,2013-12-01 This book is an English translation of the last French edition of Bourbaki s Fonctions d une Variable R elle The first chapter is devoted to derivatives Taylor expansions the finite increments theorem convex functions In the second chapter primitives and integrals on arbitrary intervals are studied as well as their dependence with respect to parameters Classical functions exponential logarithmic circular and inverse circular are investigated in the third chapter The fourth chapter gives a thorough treatment of differential equations existence and unicity properties of solutions approximate solutions dependence on parameters and of systems of linear differential equations The local study of functions comparison relations asymptotic expansions is treated in chapter V with an appendix on Hardy fields The theory of generalized Taylor expansions and the Euler MacLaurin formula are presented in the sixth chapter and applied in the last one to thestudy of the Gamma function on the real line as well as on the complex plane Although the topics of the book are mainly of an advanced undergraduate level they are presented in the generality needed for more advanced purposes functions allowed to take values in topological vector spaces asymptotic expansions are treated on a filtered set equipped with a comparison scale theorems on the dependence on parameters of differential equations are
