Evaluating Rational Functions

A) Evaluate each function at the specified value.

1) $f(x) = \dfrac{x+1}{3}$; $x = -10$

2) $f(x) = \dfrac{x^2 - 2x}{4x}$; $x = 4$

3) $f(x) = \dfrac{5x - 8}{-10x + 4}$; $x = -2$

4) $f(x) = \dfrac{3x + 1}{5}$; $x = 8$

B) Evaluate each function.

1) If $f(x) = \dfrac{x^2 - 4x + 6}{2x}$, find $f(7)$.

2) If $f(x) = \dfrac{8x}{x - 3}$, find $f(1)$.

Torrence,2019-05-16 An introduction to Mathematica and the Wolfram Language TM in the familiar context of the standard university mathematics curriculum **Maple V: Mathematics and its Applications** Robert J. Lopez,2012-12-06 The Maple Summer Workshop and Symposium MSWS 94 reflects the growing commu nity of Maple users around the world This volume contains the contributed papers A careful inspection of author affiliations will reveal that they come from North America Europe and Australia In fact fifteen come from the United States two from Canada one from Australia and nine come from Europe Of European papers two are from Ger many two are from the Netherlands two are from Spain and one each is from Switzerland Denmark and the United Kingdom More important than the geographical diversity is the intellectual range of the contributions We begin to see in this collection of works papers in which Maple is used in an increasingly flexible way For example there is an application in computer science that uses Maple as a tool to create a new utility There is an application in abstract algebra where Maple has been used to create new functionalities for computing in a rational function field There are applications to geometrical optics digital signal processing and experimental design Community College Mathematics Brian Cafarella,2022-06-29 This book explores the rich history of community college math with a specific focus on gatekeeper math classes Gatekeeper math classes include courses such as college algebra introduction to statistics and all developmental math classes For community colleges successful completion of these classes is imperative for student

retention This book presents a decade by decade analysis of the history of community college mathematics The author employs a mix of conceptual empirical and quantitative research The empirical research stems from interviews with 30 community college faculty members from seven community colleges From the 1970s to the pandemic in the early 2020s the book explores math curricula as well as trends initiatives teaching practices and mandates that have impacted community college math The positives and negatives of such trends initiatives and mandates are presented along with suggestions on how to apply such knowledge going forward The author addresses the key questions How can we build a future model for community college gatekeeper math classes that is both successful and sustainable Additionally how can we learn from the past and the present to build such a model This book will be ideal for students in graduate programs focusing on community college leadership or developmental education leadership as well as all those hoping to improve success rates in community college mathematics programs   *Proceedings of the Fifth Annual International Conference on Technology in Collegiate Mathematics* Lewis Lum,1994 Over 1500 mathematicians from around the world attended The Fifth Annual International Confererence on Technology in Collegiate Mathematics The conference theme was Exploring the Mathematics Learning Environment of Tomorrow Among the many conference highlights were lectures on applying systems engineering to education how contents of courses have changed in this computer era and real mathematics rational computers and complex people   **Cluster Algebras and Poisson Geometry** Michael Gekhtman,Michael Shapiro,Alek Vainshtein,2010 The first book devoted to cluster algebras this work contains chapters on Poisson geometry and Schubert varieties an introduction to cluster algebras and their main properties and geometric aspects of the cluster algebra theory in particular on its relations to Poisson geometry and to the theory of integrable systems   *The Convenient Setting of Global Analysis* Andreas Kriegl,Peter W. Michor,2024-08-15 This book lays the foundations of differential calculus in infinite dimensions and discusses those applications in infinite dimensional differential geometry and global analysis not involving Sobolev completions and fixed point theory The approach is simple a mapping is called smooth if it maps smooth curves to smooth curves Up to Fr chet spaces this notion of smoothness coincides with all known reasonable concepts In the same spirit calculus of holomorphic mappings including Hartogs theorem and holomorphic uniform boundedness theorems and calculus of real analytic mappings are developed Existence of smooth partitions of unity the foundations of manifold theory in infinite dimensions the relation between tangent vectors and derivations and differential forms are discussed thoroughly Special emphasis is given to the notion of regular infinite dimensional Lie groups Many applications of this theory are included manifolds of smooth mappings groups of diffeomorphisms geodesics on spaces of Riemannian metrics direct limit manifolds perturbation theory of operators and differentiability questions of infinite dimensional representations   **Resources in Education** ,1998   **Advances in the Theory of Control, Signals and Systems with Physical Modeling** Jean Levine,Philippe Müllhaupt,2010-10-05 In the 60 s control signals and systems had a common linear algebraic background and according to their evolution their respective

backgrounds have now dramatically differed Recovering such a common background especially in the nonlinear context is currently a fully open question The role played by physical models finite or infinite dimensional in this hypothetical convergence is extensively discussed in this book The discussion does not only take place on a theoretical basis but also in the light of two wide classes of applications among the most active in the current industrially oriented researches Electrical and Mechatronical systems Chemical Processes and systems appearing in Life Sciences In this perspective this book is a contribution to the enhancement of the dialogue between theoretical laboratories and more practically oriented ones and industries This book is a collection of articles that have been presented by leading international experts at a series of three workshops of a Bernoulli program entitled Advances in the Theory of Control Signals and Systems with Physical Modeling hosted by the Bernoulli Centre of EPFL during the first semester of 2009 It provides researchers engineers and graduate students with an unprecedented collection of topics and internationally acknowledged top quality works and surveys
