J. Briggs, 2002-03-29 A decade ago New American Schools NAS launched an ambitious effort for whole school reform to address the perceived lagging achievement of American students and the lackluster school reform attempts that have produced so few meaningful changes As a private nonprofit organization NAS set out to help schools and districts significantly raise the achievement of large numbers of students by offering whole school designs and design based assistance during the implementation process NAS is currently in the scale up phase of its effort and its designs are being widely diffused to schools across the nation During the 1997\_1998 and 1998\_1999 school years RAND

assessed the effects of NAS designs on classroom practice and student achievement in a sample of schools in a high poverty district RAND found that high poverty schools often have fragmented and conflicting environments with difficult and changing political currents and entrenched unions Teachers in high poverty schools tend to face new accountability systems and fluctuating reform agendas These teachers generally lack sufficient time for implementing reform efforts often becoming demoralized and losing their enthusiasm for the difficult task of improving student performance under difficult conditions RAND concluded that high stakes tests may motivate schools to increase performance and to seek out new curricula and instructional strategies associated with comprehensive school reforms However those same tests may provide disincentives to adopt richer more in depth curricula that can succeed in improving the learning opportunities of all students particularly those in high poverty settings

**Elementary Mathematics Curriculum Materials** Janine T. Remillard, Ok-Kyeong Kim, 2020-03-16 The book presents comparative analyses of five elementary mathematics curriculum programs used in the U.S. from three different perspectives the mathematical emphasis the pedagogical approaches and how authors communicate with teachers These perspectives comprise a framework for examining what curriculum materials are comprised of what is involved in reading and interpreting them and how curriculum authors can and do support teachers in this process Although

the focus of the analysis is 5 programs used at a particular point in time this framework extends beyond these specific programs and illuminates the complexity of curriculum materials and their role in teaching in general Our analysis of the mathematical emphasis considers how the mathematics content is presented in each program in terms of sequencing the nature of mathematical tasks cognitive demand and ongoing practice and the way representations are used Our analysis of the pedagogical approach examines explicit and implicit messages about how students should interact with mathematics one another the teacher and the textbook around these mathematical ideas as well as the role of the teacher In order to examine how curriculum authors support teachers we analyze how they communicate with teachers and what they communicate about including the underlying mathematics noticing student thinking and rationale for design elements The volume includes a chapter on curriculum design decisions based on interviews with curriculum authors
