

I. GENERAL CHARACTERISTICS

1. **Method of functioning.** — The weapon is gas-operated. Gas intake is controlled by means of a regulator, which ensures regular and smooth functioning, without excessive recoil. The breech block is mechanically locked before firing can take place; in addition, unlocking cannot take place until the bullet has left the barrel.

As the breech block must necessarily be in the forward position when firing takes place, accuracy is not affected by the forward movement of a fairly heavy mass, which is one of the draw-backs of many automatic weapons.
