Early Drug Development, 2 Volume Set Fabrizio Giordanetto, 2018-12-10 This one stop reference systematically covers key aspects in early drug development that are directly relevant to the discovery phase and are required for first in human studies Its broad scope brings together critical knowledge from many disciplines ranging from process technology to pharmacology to intellectual property issues After introducing the overall early development workflow the critical steps of early drug development are described in a sequential and enabling order the availability of the drug substance and that of the drug product the prediction of pharmacokinetics and dynamics as well as that of drug safety The final section focuses on intellectual property aspects during early clinical development The emphasis throughout is on recent case studies to exemplify salient points resulting in an abundance of practice oriented information that is usually not available from other sources Aimed at medicinal chemists in industry as well as academia this invaluable reference enables readers to understand and navigate the challenges in developing clinical candidate molecules that can be successfully used in phase one clinical trials

Advances in Chemical Analysis Procedures (Part II) Marcello Locatelli, Victoria Samanidou, 2021-01-20 In the field of Analytical Chemistry and in particular whenever a qualitative quantitative analysis is required until a few years ago reference was made exclusively to instrumental methods more or less hyphenated which once validated were able to provide the answers to the questions present even if only in a limited way to analytical targets Nowadays the landscape has become considerably complicated natural adulterants assessment of geographical origin sophistication need for non destructive analysis search for often unknown compounds and new procedures for processing data have greatly increased the potential of analyses that are conducted even routinely in the laboratory In this scenario chemometrics is master able to manage and process a huge amount of information based both on data relating only to the analytes of interest but also by applying general procedures to process raw untargeted analysis data It is within this strand of analysis that many of the works reported in this Special Issue fall In the succession of works in this printed version the criterion that guided us was to highlight how starting exclusively from chromatographic techniques HPLC and GC with conventional detectors and moving to exclusively spectroscopic techniques MS FT IR and Raman it is possible arrive at extremely powerful coupled techniques and procedures HPLC and FT IR able to meet research needs Finally at the end of the printed volume there are two reviews that surveying the state of the art regarding the assessment of authenticity through qualitative analyses and the application of chemometrics in the pharmaceutical field in the study of forced drug degradation products From the succession of works and above all from the various application fields it can immediately be seen how the application of chemometrics and its procedures to both raw and processed data is a powerful means of obtaining robust reproducible and predictive information In this manner it is possible to create models able to explain and respond to the original problem in a much more detailed way and Honghe through Fourier transform mid infrared FT MIR spectra combined with partial least squares discriminant analysis PLS DA random

forest RF and hierarchical cluster analysis HCA methods Melucci and collaborators apply chemometric approaches to non destructive analysis of ATR FT IR for the determination of biosilica content This value was directly evaluated in sediment samples without any chemical alteration using attenuated total reflection Fourier transform infrared ATR FTIR spectroscopy and the quantification was performed by combining the multivariate standard addition method MSAM with the net analyte signal NAS procedure to solve the strong matrix effect of sediment samples Still in the food and food supplements field Anguebes Franeschi and collaborators report an article where 10 chemometric models based on Raman spectroscopy were applied to predict the physicochemical properties of honey produced in the state of Campeche Mexico
