The Great Catalyst Bülent Temel, 2013-12-19 For over half a century European Union has been a promising endeavor of cooperative institutionalism It has shown that even nation states with a long history of conflict are capable of collaborating with one another to serve their own interests However the EU project has also made visible that there is no one size fits all policy in economics that can be applied to all countries with success Economics starts and ends with the society Common culture determines the outcomes of economic policies and ordinary people pick up the bill when policies turn out to be failures This book presents two different tales of the European Union to provide an empirical challenge to oversimplified assumptions behind the neoliberal orthodoxy in policymaking Favorable experience of the EU candidate Turkey and the regrettable venture of the EU member Greece The fact that these two neighboring countries with similar cultures have had vastly different experiences with the European Union suggests that the EU functions as a catalyst of change in the countries that associate with it but this impact could be negative as well as positive depending on the role the EU plays Political economist B lent Temel presents a lucid analysis of the Turkish and Greek encounters with the EU based on contributions from a diverse range of social sciences economics game theory finance political science and sociology *Foreign Direct Investment in Brazil* Mohamed Amal, 2016-04-19 Foreign Direct Investment in Brazil Post Crisis Economic Development in Emerging Markets explores both the inward and outward ways foreign direct investment FDI can help Brazil sustain economic growth and development in the sometimes hostile post global crisis era Inward and outward FDI have major roles to play in reviving Brazil s growth momentum and the country s transition to a new growth paradigm less dependent on commodity exports The book provides a comprehensive discussion on the analytical framework of FDI and the policy environment influencing the patterns and development of FDI in Brazil It compares Brazil to other developing countries but its focus rests on how and to what extent the global crisis is shaping the Brazilian institutional environment and its implications for FDI Covers an important contemporary development issue focusing on the experience of one of the fastest growing and largest emerging economies in the world Presents econometric findings using data at different levels of aggregation Provides an in depth study on the determinants of FDI and their relations to institutions Explores both the

As culture and society has become more digitalized especially when computer science and digital technologies have entered a new era in the twenty first century translation studies began to utilize a wide range of tools to enhance its reading of texts and contexts without which translation both as a practice and as a theorization could barely persist It has become more apparent that two extreme poles between macro and micro visions have formed the diversified terrains of translation studies On the one hand technologies like NLP topic modeling network analysis and data visualization make distant reading become possible thus allowing us to have a paradigmatic view of how human s ideas beliefs values knowledge and even emotions have spread in some patterns across cultural geographical and language divides in world history On the other hand corpus methods such as the use of keywords collocates and concordance lines changed the way by which texts were closely read from linear to vertical With microscope like corpus tools we could go deeper into the texture for perception of nuanced meaning While considering a fact that translation is seldom mono modal in conveying meaning we have to reconceptualize context as a multimodal environment where audio visual and other resources interact to convey and make meaning With regard to the fast development of digital technology translation studies take an active role in gaining an enhanced capability in promoting transformation Complexity has been favored in terms of theoretical framework and methodology New questions are asked old ones revisited with novel tools but more areas wait to be cultivated and more questions to be approached by combining quantitative and qualitative methods We could ask if digital technologies would bring new innovation to study of translation history a heavily walled land for traditional humanists who tend to repeat so what to question the less significance of data driven studies The idea of high quality machine translation has become so realistic in today s market that translation educators have to face the shock wave it brought to translation learners and practitioners and rethink the relation between human translators and algorithms Machine translation assisted communication could help remove boundaries for better communication but at the same time it also creates conflicts and leads to confrontation Thus understood it is imperative to give a concerned attention to digital translation studies that is to study translation by resorting to and drawing on the digital technologies This Research Topic is intended to promote current directions and new developments in cross disciplinary critical discourse research We welcome papers which from a critical analytical perspective deal with contemporary social scientific political economic or professional discourses and genres Papers addressing the highlighted topics are especially welcome In giving weight to these topics we wish to call to attention some of the most pressing problems currently facing the world

Resistance in the Age of Austerity Owen Worth, 2013-04-11 In November 1999 the first protests associated with the anti globalisation movement took place in Seattle and came to be seen as the starting point for globalised resistance to neoliberal capitalism Despite initial optimism the following years have seen little progress in formulating a coherent

alternative to neoliberalism a failure that has become particularly poignant in the aftermath of the recent credit crisis Now the neoliberal mandate that appeared to be in crisis in just 2008 has reinvented itself through the guise of a new era of austerity In this timely book Worth assesses the growing diversity of resistance to neoliberalism progressive nationalist and religious and argues that troublingly the more reactionary alternatives to globalisation currently provide just as coherent a base for building opposition as those associated with the traditional left wing anti globalisation movements From the shortcomings of the Occupy movement to the rise of Radical Islam the re emergence of the far right in Western Europe to the startling impact of the Tea Party in the US Worth shows that while a progressive alternative is possible it cannot be taken for granted
