Providing Integrity, Awareness, and Consciousness in Distributed Dynamic Systems Peter Simon Sapaty, 2024-04-15 The ideas of this book originate from the mobile WAVE approach which allowed us more than a half century ago to implement citywide heterogeneous computer networks and solve distributed problems on them well before the internet The invented paradigm evolved into Spatial Grasp Technology and resulted in a European patent and eight books The volumes covered concrete applications in graph and network theory defense and social systems crisis management simulation of global viruses gestalt theory collective robotics space research and related concepts The obtained solutions often exhibited high system qualities like global integrity distributed awareness and even consciousness This current book takes these important characteristics as primary research objectives together with the theory of patterns covering them all This book is oriented towards system scientists application programmers industry managers defense and security commanders and university students especially those interested in advanced MSc and PhD projects on distributed system management as well as philosophers psychologists and United Nations personnel

Spatial Grasp as a Model for Space-based Control and Management Systems Peter Simon Sapaty, 2022-06-23 Governmental agencies and private companies of different countries are actively moving into space around Earth with the aim to provide smart communication and industry security and defense solutions This often involves massive launches of small cheap satellites in low earth orbits which is also contributing to the growth of space debris The book offers a high level holistic system philosophy model and technology that can effectively organize distributed space based systems starting with their planning creation and growth The Spatial Grasp Technology described in the book based on parallel navigation and pattern matching of distributed environments with high level recursive mobile code can effectively provide any networking protocols and important system applications by integrating and tasking available terrestrial and celestial equipment This book contains practical examples of technology based solutions for tracing hypersonic gliders continuing observation of certain objects and infrastructures on Earth from space space based command and control of large distributed systems as well as collective removal of increasing amounts of space junk Earlier versions of this technology were prototyped and used in different countries with the current version capable of being quickly implemented in traditional industrial or even university environments This book is oriented

toward system scientists application programmers industry managers and university students interested in advanced MSc and PhD projects related to space conquest and distributed system management Dr Peter Simon Sapaty Chief Research Scientist Ukrainian Academy of Sciences has worked with networked systems for five decades Outside of Ukraine he has worked in the former Czechoslovakia now Czech Republic and Slovakia Germany the UK Canada and Japan as a group leader Alexander von Humboldt researcher and invited and visiting professor He launched and chaired the Special Interest Group SIG on Mobile Cooperative Technologies in Distributed Interactive Simulation project in the United States and invented a distributed control technology that resulted in a European patent and books with Wiley Springer and Emerald He has published more than 250 papers on distributed systems and has been included in the Marquis Who's Who in the World and Cambridge Outstanding Intellectuals of the 21st Century Peter also works with several international scientific journals

 designed narrative atlas illustrating the agency of nonliving materials with unique ubiquitous and often hidden influence on
 our daily lives Employing new materialism as a jumping off point it examines the increasingly blurry lines between the
 organic and inorganic engaging the following questions What roles do nonliving materials play Might a closer examination of
 those roles reveal an undeniable agency we have long overlooked or disregarded If so does this material agency change our
 understanding of the social structures ecologies economies cosmologies technologies and landscapes that surround us And
 perhaps most importantly why does material agency matter This is the story of the world's driest nonpolar desert pink
 flamingos and cerulean blue lithium ponds industrial shipping logistics pudding like jiggling substrates and monuments of
 mud galactic bodies radioactive sheep and the yellowcake of uranium Put simply this book dares readers to see the world
 anew from material up Atlas of Material Worlds offers this new relationship to our host environment in a time of mounting
 crises accelerating climate change ballooning socioeconomic inequality and rising toxic nationalism uniquely telling
 materialist stories for practitioners and students in landscape architecture and other built environment disciplines
