Scheeren,2012-02-02 Google is certainly a useful Internet search tool for general topics but most of the information available on the Invisible Web can t be found through Google This book explains the value of the Invisible Web and how to access it Most students and researchers possess only rudimentary Internet searching skills The majority of school and public librarians are not aware of the breadth and depth of information available on the Hidden Web This is unfortunate as the ability to navigate the Hidden Web in schools and public libraries is essential to locating the most current and authoritative information The Hidden Web A Sourcebook serves as a valuable source of information about the Hidden Web much of which comprises websites containing statistical information or data from a wide variety of government agencies The concepts search techniques and specific websites presented will be helpful in information literacy instruction and the teaching of research skills Dynamic Taxonomies and Faceted Search Giovanni Maria Sacco,Yannis Tzitzikas,2009-08-14 Current access paradigms for the Web i e direct access via search engines or database queries and navigational access via static taxonomies have recently been criticized because they are too rigid or simplistic to effectively cope with a large number of practical search applications A third paradigm dynamic taxonomies and faceted search focuses on user centered conceptual exploration which is far more frequent in search tasks than retrieval using exact specification and has rapidly become pervasive in modern Web data retrieval especially in critical applications such as product selection for e commerce It is a heavily interdisciplinary area where data modeling human factors logic inference and efficient implementations must be dealt with holistically Sacco Tzitzikas and their contributors provide a coherent roadmap to dynamic taxonomies and faceted search The individual chapters written by experts in each relevant field and carefully integrated by the editors detail aspects like modeling schema design system implementation search performance and user interaction The basic concepts of each area are introduced and advanced topics and recent research are highlighted An additional chapter is completely devoted to

current and emerging application areas including e commerce multimedia multidimensional file systems and geographical information systems The presentation targets advanced undergraduates graduate students and researchers from different areas from computer science to library and information science as well as advanced practitioners Given that research results are currently scattered among very different publications this volume will allow researchers to get a coherent and comprehensive picture of the state of the art
