To achieve highest operator safety, combined with peace of mind, the new **"DOUBLE ACTION ONLY"** has no manual safety and the new **"SAFE"** has no manual safety and the new **"SAFE"** has no manual safety.

The hammer is of a novel design. Compared to a conventional hammer, the W&M is very light and consequently, operates at high velocities. It is driven by a powerful free floating extension spring. Furthermore, the hammer's mass is constrained around its axis of rotation so that it is in the critical direction of the firing pin stroke.

In its ready position the hammer is strongly held by the hammer block. Only by deliberately pulling the blade can the hammer block be disengaged. The sliding action of the hammer excludes finger pressure; the breath is fully relaxed. A direct blow to the hammer is impossible. The hammer is held in the palm of the hand and the blade and grip. The hammer's motion is controlled by the wrist and forearm.

**Failure to Feed:** This occurs when a particle has been fed from a magazine but not fully consumed. When a particle is not consumed in a safe manner, removal of the magazine reverses the slide manually and continuous shooting. If secondary change the magazine. The most common causes are not to design safety engaged in the magazine.

There are a few other things you should keep in mind. First, if you are not fully vaccinated from the disease, you should not use the pistol. Again, keep the pistol pointed in a safe direction. Operate the pistol by squeezing the slide, between the palm and thumb. If excessively shaking the magazine, the more serious causes are a damaged extractor, ejector or ammunition. Improperly loaded or sized cartridges can cause this also. If any of the above problems are not solved by cleaning or by use of other brands of ammunition, stop firing, unload and return the pistol to our service department.
