Climate Refugees Simon Behrman,Avidan Kent,2022-03-17 A discussion of cutting edge developments in policy on climate change and forced displacement from leading academics and practitioners [The Microbial Regulation of Global Biogeochemical Cycles](#) Johannes Rousk,Per Bengtson,2014-10-17 Global biogeochemical cycles of carbon and nutrients are increasingly affected by human activities So far modeling has been central for our understanding of how this will affect ecosystem functioning and the biogeochemical cycling of carbon and nutrients These models have been forced to adopt a reductive approach built on the flow of carbon and nutrients between pools that are difficult or even impossible to verify with empirical evidence Furthermore while some of these models include the response in physiology ecology and biogeography of primary producers to environmental change the microbial part of the ecosystem is generally poorly represented or lacking altogether The principal pool of carbon and nutrients in soil is the organic matter The turnover of this reservoir is governed by microorganisms that act as catalytic converters of environmental conditions into biogeochemical cycling of carbon and nutrients The dependency of this conversion activity on individual environmental conditions such as pH moisture and temperature has been frequently studied On the contrary only rarely have the microorganisms involved in carrying out the processes been identified and one of the biggest challenges for advancing our understanding of biogeochemical processes is to identify the microorganisms carrying out a specific set of metabolic processes and how they partition their carbon and nutrient use We also need to identify the factors governing these activities and if they result in feedback mechanisms that alter the growth activity and interaction between primary producers and microorganisms By determining how different groups of microorganisms respond to individual environmental conditions by allocating carbon and nutrients to production of biomass CO₂ and other products a mechanistic as well as quantitative understanding of formation and decomposition of organic matter and the production and consumption of greenhouse gases can be achieved In this Research Topic supported by the Swedish research councils programme Biodiversity and Ecosystem Services in a Changing Landscape BECC we intend to promote this alternative framework to address how cycling of carbon and nutrients will be altered in a changing environment from the first principle mechanisms that drive them namely the ecology physiology and biogeography of microorganisms and on up to emerging global biogeochemical patterns This novel and unconventional approach has the potential to generate fresh insights that can open up new horizons and stimulate rapid conceptual development in our basic

understanding of the regulating factors for global biogeochemical cycles The vision for the research topic is to facilitate such progress by bringing together leading scientists as proponents of several disciplines By bridging Microbial Ecology and Biogeochemistry connecting microbial activities at the micro scale to carbon fluxes at the ecosystem scale and linking above and belowground ecosystem functioning we can leap forward from the current understanding of the global biogeochemical cycles **The Human and Environmental Impact of Fracking** Madelon L. Finkel, 2015-03-24 Fracking for gas trapped in shale could be a game changer in the quest to find alternatives to dirty fossil fuels but it also has potential for harm This book provides one stop shopping for everyone who wants to know more about the issues Oil and gas account for a large percentage of the world's energy consumption and the search for new ways to extract both from the earth is a global quest Fracking is viewed as an energy game changer but is a controversial topic about which there is much misunderstanding This unbiased work was written to bring clarity to the issues Under the guidance of an internationally recognized public health expert this book provides a comprehensive look at unconventional natural gas development from many different perspectives Written for the layperson the book dispels myths surrounding fracking corrects misconceptions and offers impartial scientifically based information on both benefits and challenges Readers will learn about the effects fracking has on the environment our water air and climate as well as on human and animal health The contributors also look at the economics of fracking and at its socioeconomic impact on local communities and nations They discuss legal and ethical issues related to the practice and in keeping with the intent to provide a fair and balanced overview share the industry perspective as well
