**HISTORY:** Documentation of history includes CC, HPI, ROS, and PFH.

- ☐ **Internal History:** Subsequent hospital care only requires documentation of new history since last encounter.
- ☐ **Unstable/Unstable History:** Document reason. For example, "Further history was unstable/unstable because <...>."

**EXAMINATION:** Document specific abnormal, unexpected, and adverse negative findings. A collection of negative or normal is sufficient for normal findings. Extent of exam documented depends on PP.

**MEDICAL DECISION-MAKING:** MDGM can be viewed as the outcome of a cognitive process that leads to the selection of a course of action to diagnose or treat a patient. There are 3 distinct components to MDGM: number of problems, data reviewed/ordered, and risk. The first 2 are quantified; risk is up to the health-care professional to determine. To qualify for a given type of MDGM, 2 of the 3 elements must be met or exceeded.

**TIME:** For visits dominated by counseling or coordinating care, document total face-to-face time (disruptive) or visit flow time (disruptive) and that >50% of total time was dominated by counseling or coordinating care. In flow of key components, time can be used to determine L/N level: <10% was spent counseling and coordinating care. Time is counted only by the reporting/health-care professional. Documentation requirements: "I personally spent a total time of <...> minutes in the care of this patient; of that, <...> minutes was spent in counseling and coordinating care face-to-face."

environment they must balance standardization based on shared medical knowledge with the flexibility required for customization to the individual patient. Developing innovative approaches to design and build evidence based careflow management systems is essential for providing the knowledge management infrastructure of health care organizations that seeks to increase performance in delivering high quality care services by efficiently exploiting available resources. Parallel challenges arise in the organization of research at the biological and clinical levels where the focus on systematically organizing and supporting processes of scientific inquiry by novel informatics methods and databases are in their very early stages. These Proceedings of Medinfo 2004 demonstrate the base of knowledge medical informatics professionals will collectively draw upon in the years ahead to meet these challenges and realize opportunities.
