David Cooper, Forensic Scientist

CareerWatch: As a forensic scientist, you help solve crimes. What's the scariest situation you have found yourself in while working on a case?

David: Actually, my job is very safe. I work right here in this lab. I analyze data and materials. I hardly ever visit the crime scene. In fact, the most dangerous part of my job is the chemicals I use to develop fingerprints.

CareerWatch: On television, forensic scientists are often shown at crime scenes or running after criminals. Are you saying your job isn't like that?

David: That's right. All the drama on TV is meant to make the shows more interesting. But the jobs of crime scene investigators and forensic scientists are very different. Investigators bring in all the evidence, and I work to piece it together in the crime lab.

CareerWatch: Tell us about some of the tools and materials you work with every day.

David: Our lab has different stations for different tasks. We have chemicals and machines that can analyze DNA, fingerprints, hair samples, and other evidence. Today, I'm putting together a complete fingerprint from a smudged sample that the investigators found at the crime scene.

CareerWatch: On TV shows, forensic scientists use fancy computer equipment such as facial recognition software, 3D displays of crime scenes, and giant computer screens. Is that an accurate depiction?

David: Well, we do have high-tech equipment, but it's not exactly as you see on TV. Studying evidence isn't nearly as quick and easy as Hollywood makes it seem.
