## 25. Running vs. Cheating

- **What is the purpose of the study?**

As mentioned in the first paper, we have two different ways of measuring the relationship between the variables. The first way is to use the correlation coefficient. The second way is to use the regression coefficient. The correlation coefficient is a measure of the strength of the relationship between two variables. The regression coefficient is a measure of the change in the dependent variable for a one unit change in the independent variable. In this paper, we will use the correlation coefficient to measure the relationship between the variables. The correlation coefficient is calculated as follows:

- **“Global” research in management science: How do we do it?**

As a consequence, the village was used as a base to launch the guerrilla war in the region, including the kidnapping of local politicians and other influential people. The military then, after Brazil's main police, started operations of this property because the threat was, said the Brazilian state police with the support of the military and police.

- What are the advantages of creating a new group? What are the disadvantages?
