Modern Mathematics Education for Engineering Curricula in Europe Seppo Pohjolainen, Tuomas Myllykoski, Christian Mercat, Sergey Sosnovsky, 2018-07-16. This open access book provides a comprehensive overview of the core subjects comprising mathematical curricula for engineering studies in five European countries and identifies differences between two strong traditions of teaching mathematics to engineers. The collective work of experts from a dozen universities critically examines various aspects of higher mathematical education. The two EU Tempus IV projects MetaMath and MathGeAr investigate the current methodologies of mathematics education for technical and engineering disciplines. The projects aim to improve the existing mathematics curricula in Russian, Georgian, and Armenian universities by introducing modern technology enhanced learning (TEL) methods and tools as well as by shifting the focus of engineering mathematics education from a purely theoretical tradition to a more applied paradigm. MetaMath and MathGeAr have brought together mathematics educators, TEL specialists, and experts in education quality assurance from 21 organizations across six countries. The results of a comprehensive comparative analysis of the entire spectrum of mathematics courses in the EU, Russia, Georgia, and Armenia have been conducted, have allowed the consortium to pinpoint and introduce several modifications to their curricula while preserving the generally strong state of university mathematics education in these countries. The book presents the methodology, procedure, and results of this analysis. This book is a valuable resource for teachers, especially those teaching mathematics and curriculum planners for engineers, as well as for a general
