

SCIENCE IN EVERYDAY LIFE ESSAY

Science is present all around us, from the smallest things such as needles to large objects such as aeroplanes. Science is also an essential part of our everyday lives because it helps us solve everyday problems, enhances our health, and helps society progress.

Science has taken the foremost place in human life. Every branch of science can be seen all around us. Computer Science can be seen in mobile phones, smartwatches and computers; Medical Science is there in the medicines we take; Communication in today's world is hardly possible without applying laws of physics.

Science primarily exists around us in the form of nature. It is there in all sorts of phenomena such as the movement of the earth around the sun, the behaviour of the human body, the scattering of light in our atmosphere etc.

Science influences every aspect of our life. It has an impact on what we eat and drink, where we go to relax, what we wear, what we talk about, etc. It has also made us break the barriers that existed in the past. Thus, Science has enormously contributed to the development of human beings.

Science Curriculum Topic Study Page Keeley, 2005-02-23 Without question this book will be of great value to the profession of science teaching. Given today's educational landscape of standards and high stakes testing, curriculum topic study is an essential piece of the puzzle. Cary Sneider, Vice President for Educator Programs, Museum of Science, Boston. Discover the missing link between science standards, teacher practice, and improved student achievement. Becoming an accomplished science teacher not only requires a thorough understanding of science content but also a familiarity with science standards and research on student learning. However, a comprehensive strategy for translating standards and research into instructional practice has been lacking since the advent of standards-based education reform. Science Curriculum Topic Study provides a systematic professional development strategy that links science standards and research to curriculum instruction and assessment. Developed by author Page Keeley of the Maine Mathematics and Science Alliance, the Curriculum Topic Study CTS process can help teachers align curriculum instruction and assessment with specific research-based ideas and skills. The CTS process will help teachers improve their understanding of science content, clarify a hierarchy of content and skills in a learning goal from state or local standards, define formative and summative assessment goals and strategies, learn to recognize and address learning difficulties, increase opportunities for students of all backgrounds to achieve science literacy, design or utilize instructional materials effectively. Containing 147 separate curriculum topic study guides arranged in eleven categories that represent the major domains of science, this book provides the tools to both positively impact student learning and develop the knowledge and skills that distinguish expert science teachers from novices.
