Survey of Family Growth NSFG conducted by the National Center for Health Statistics Data were collected through personal
interviews with a multistage area probability sample of 7969 women aged 15 44 A detailed series of questions was asked to
obtain relatively complete estimates of the extent and type of family planning services received Statistics on family planning
services are limited to women who were able to conceive 3 years before the interview date Overall 79% of currently married
nonsterile women reported using some type of family planning service during the previous 3 years There were no statistically
significant differences between white 79% black 75% or Hispanic 77% wives or between the 2 income groups The 1982
survey questions were more comprehensive than those of earlier cycles of the survey The annual rate of visits for family
planning services in 1982 was 1077 visits 1000 women Teenagers had the highest annual visit rate 1581 1000 of any age
group for all sources of family planning services combined Visit rates declined sharply with age from 1447 at ages 15 24 to

Nevertheless the annual visit rate for black women 1334 1000 was significantly higher than that for white women 1033 The
highest overall visit rate was for black women 15 19 years of age 1867 1000 Nearly 2 3 of all family planning visits were to
private medical sources Teenagers of all races had higher family planning service visit rates to clinics than to private medical
sources as did black women age 15 24 White women age 20 and older had higher visit rates to private medical services than
to clinics Never married women had higher visit rates to clinics than currently or formerly married women Data were also
collected in 1982 on use of medical services for infertility by women who had difficulty in conceiving or carrying a pregnancy
to term About 1 million ever married women had 1 or more infertility visits in the 12 months before the interview During the
3 years before interview about 1 9 million women had infertility visits For all ever married women as well as for white and
black women separately infertility services were more likely to be secured from private medical sources than from clinics The
