East European Accessions Index, 1956 Ordered Exponential Fields Salma Kuhlmann, 2000 Model theoretic algebra has witnessed remarkable progress in the last few years It has found profound applications in other areas of mathematics notably in algebraic geometry and in singularity theory Since Wilkie's results on the $\aleph_0$ -minimality of the expansion of the reals by the exponential function and most recently even by all Pfaffian functions the study of $\aleph_0$ -minimal expansions of the reals has become a fascinating topic The quest for analogies between the semi algebraic case and the $\aleph_0$ -minimal case has set a direction to this research Through the Artin-Schreier Theory of real closed fields the structure of the non archimedean models in the semi algebraic case is well understood For the $\aleph_0$ -minimal case so far there has been no systematic study of the non archimedean models The goal of this monograph is to serve this purpose The author presents a detailed description of the non archimedean models of the elementary theory of certain $\aleph_0$ -minimal expansions of the reals in which the exponential function is definable The example of exponential Hardy fields is worked out with particular emphasis The basic tool is valuation theory and a sufficient amount of background material on orderings and valuations is presented for the

convenience of the reader
