Territorial Analysis of Environments Etienne Cossart,Anne Rivière-Honegger,2024-10-31

Territories are currently faced with a wide range of environmental challenges but suffer from a lack of access to the information and biophysical data that characterizes these challenges Territorial Analysis of Environments sheds light on how the data produced on environmental change needs to be processed, completed and disseminated so that local players can take ownership of it The aim is to present methods for developing local, regional or even global indicators of the changes underway as well as to understand the logic of the players acting in a given area To this end this book places great emphasis on the notions of systems and the modeling approaches used to formalize them It also presents the data available and the methods for developing an analysis of their spatial dimension This is based on a wide range of case studies combining environmental data and stakeholder games

World Heritage, Tourism and Identity Laurent Bourdeau,Maria Gravari-Barbas,2016-03-09 The remarkable success of the 1972 UNESCO Convention Concerning the Protection of World Cultural and Natural Heritage is borne out by the fact that nearly 1 000 properties have now been designated as possessing Outstanding Universal Value and recognition given to the imperative for their protection However the remarkable success of the Convention is not without its challenges and a key issue for many sites relates to the touristic legacies of inscription For many sites inscription on the World Heritage List acts as a promotional device and the management challenge is one of protection, conservation and dealing with increased numbers of tourists For other sites designation has not brought anticipated expansion in tourist numbers and associated investments What is clear is that tourism is now a central concern to the wide array of stakeholders involved with World Heritage Sites
