Materials
For this paper you must have:
- a calculator
- mathematical instruments
- the Formulae Sheet (enclosed).

Instructions
- Use black ink or black ball-point pen. Draw diagrams in pencil.
- Fill in the boxes at the top of this page.
- Answer **all** questions.
- You must answer the questions in the spaces provided. Do not write outside the box around each page or on blank pages.
- If you need extra space for your answer(s), use the lined pages at the end of this book. Write the question number against your answer(s).
- Do all rough work in this book. Cross through any work you do not want to be marked.

Information
- The marks for questions are shown in brackets.
- The maximum mark for this paper is 80.
- You may ask for more answer paper, graph paper and tracing paper. These must be tagged securely to this answer book.

Advice
In all calculations, show clearly how you work out your answer.

Conceptual Maths Peter Mattock,2023-01-05 Written by Peter Mattock Conceptual Maths Teaching about rather than just how to do mathematics in schoolsaims to empower teachers to support students on a comprehensive and coherent journey through school mathematics Showcasing the best models metaphors and representations it provides excellent examples explanations and exercises that can be used across the curriculum Concepts are at the heart of the study of mathematics They are the ideas that remain constant whenever they are encountered but which combine and build upon each other to create the mathematical universe It is the structure of each concept that gives rise to the procedures that are used in calculation and problem solving and by learning about these structures a learner can make sense of how different processes work and use them flexibly as need demands In his first book Visible Maths Peter Mattock focused on the use of representations and manipulatives as images and tools and how this can provide a window into some of these mathematical structures His aim in Conceptual Mathsis to go deeper beyond the procedures and to shed greater light on the structures of the subject s different concepts The book explores how a variety of visual tools and techniques can be used in the classroom to deepen pupils understanding of mathematical structures concepts and operations including number addition and subtraction multiplication and multiples division and factors proportionality functionality measures accuracy probability shape and transformation and vectors among many others In so doing Peter equips teachers with the confidence and practical know how to help learners assimilate knowledge of mathematical concepts into their schema and take their learning to the next level Containing numerous full colour diagrams and models to illustrate the conceptual takeaways and teaching techniques discussed Conceptual Mathsalso includes a glossary covering the key mathematical terms Suitable for teachers of maths in primary secondary and post 16 settings **School Rethink 2.0** Frederick M. Hess,Michael B. Horn,Juliet Squire,2025-02-12 Ten brilliant approaches that are disrupting US education and actionable advice for their broader implementation **Introduction to Tropical Geometry** Diane Maclagan,Bernd Sturmfels,2015-04-15 Tropical geometry is a combinatorial shadow of algebraic geometry offering new polyhedral tools to compute invariants of algebraic varieties It is based on tropical algebra where the sum of two numbers is their minimum and the product is their sum This turns polynomials into piecewise linear functions and their zero sets into polyhedral complexes These tropical varieties retain a surprising amount of information about their classical counterparts Tropical geometry is a young subject that has undergone a rapid development since the beginning of the 21st century While establishing itself as an area in its own right deep connections have been made to many branches of pure and applied mathematics This book offers a self contained introduction to tropical geometry suitable as a course text for beginning graduate students Proofs are provided for the main results such as the Fundamental Theorem and the Structure Theorem Numerous examples and explicit computations illustrate the main concepts Each of the six chapters concludes with problems that will help the readers to practice their

tropical skills and to gain access to the research literature   *Nature of Computation and Communication* Phan Cong Vinh,Leonard Barolli,2016-10-25 This book constitutes the post conference proceedings of the Second International Conference on Nature of Computation and Communication ICTCC 2016 held in March 2016 in Rach Gia Vietnam The 36 revised full papers presented were carefully reviewed and selected from over 100 submissions The papers cover formal methods for self adaptive systems and discuss natural approaches and techniques for computation and communication

    Graph-Theoretic Concepts in Computer Science Andreas Brandstädt,Klaus Jansen,Rüdiger Reischuk,2013-11-12 This book constitutes the thoroughly refereed proceedings of the 39th International Workshop on Graph Theoretic Concepts in Computer Science WG 2013 held in L beck Germany in June 2013 The 34 revised full papers presented were carefully reviewed and selected from 61 submissions The book also includes two abstracts The papers cover a wide range of topics in graph theory related to computer science such as structural graph theory with algorithmic or complexity applications design and analysis of sequential parallel randomized parameterized and distributed graph and network algorithms computational complexity of graph and network problems computational geometry graph grammars graph rewriting systems and graph modeling graph drawing and layouts random graphs and models of the web and scale free networks and support of these concepts by suitable implementations and applications   **Advances in Computational Intelligence** Ignacio Rojas,Gonzalo Joya,Andreu Catala,2015-06-05 This two volume set LNCS 9094 and LNCS 9095 constitutes the thoroughly refereed proceedings of the 13th International Work Conference on Artificial Neural Networks IWANN 2015 held in Palma de Mallorca Spain in June 2013 The 99 revised full papers presented together with 1 invited talk were carefully reviewed and selected from 195 submissions The papers are organized in topical sections on brain computer interfaces applications and tele services multi robot systems applications and theory MRSAT video and image processing transfer learning structures algorithms and methods in artificial intelligence interactive and cognitive environments mathematical and theoretical methods in fuzzy systems pattern recognition embedded intelligent systems expert systems advances in computational intelligence and applications of computational intelligence   Algebra and Coalgebra in Computer Science Reiko Heckel,Stefan Milius,2013-08-27 This book constitutes the refereed proceedings of the 5th International Conference on Algebra and Coalgebra in Computer Science CALCO 2013 held in Warsaw Poland in September 2013 The 18 full papers presented together with 4 invited talks were carefully reviewed and selected from 33 submissions The papers cover topics in the fields of abstract models and logics specialized models and calculi algebraic and coalgebraic semantics system specification and verification as well as corecursion in programming languages and algebra and coalgebra in quantum computing The book also includes 6 papers from the CALCO Tools Workshop co located with CALCO 2013 and dedicated to tools based on algebraic and or coalgebraic principles   **Metrics** Vincanne Adams,2016-03-05 This volume s contributors evaluate the accomplishments limits and consequences of using quantitative metrics in global health Whether analyzing

maternal mortality rates the relationships between political goals and metrics data or the links between health outcomes and a program s fiscal support the contributors question the ability of metrics to solve global health problems They capture a moment when global health scholars and practitioners must evaluate the potential effectiveness and pitfalls of different metrics even as they remain elusive and problematic Contributors Vincanne Adams Susan Erikson Molly Hales Pierre Minn Adeola Oni Orisan Carolyn Smith Morris Marlee Tichenor Lily Walkover Claire L Wendland **Advances in Fluid-Structure Interaction** Marianna Braza,Alessandro Bottaro,Mark Thompson,2016-04-07 This book addresses flow separation within the context of fluid structure interaction phenomena Here new findings from two research communities focusing on fluids and structures are brought together emphasizing the importance of a unified multidisciplinary approach The book covers the theory experimental findings numerical simulations and modeling in fluid dynamics and structural mechanics for both incompressible and compressible separated unsteady flows There is a focus on the morphing of lifting structures in order to increase their aerodynamic and or hydrodynamic performances to control separation and to reduce noise as well as to inspire the design of novel structures The different chapters are based on contributions presented at the ERCOFTAC Symposium on Unsteady Separation in Fluid Structure Interaction held in Mykonos Greece 17 21 June 2013 and include extended discussions and new highlights The book is intended for students researchers and practitioners in the broad field of computational fluid dynamics and computational structural mechanics It aims at supporting them while dealing with practical issues such as developing control strategies for unsteady separation and applying smart materials and biomimetic approaches for design and control **Origin of Turbulence** Hua-Shu Dou,2022-03-25 This book presents the new discovery of the origin of turbulence from Navier Stokes equations The fully developed turbulence is found to be composed of singularities of flow field The mechanisms of flow stability and turbulent transition are described using the energy gradient theory which states all the flow instability and breakdown resulted from the gradient of the total mechanical energy normal to the flow direction This approach is universal for flow instability in Newtonian flow and non Newtonian flow The theory has been used to solve several problems such as plane and pipe Poiseuille flows plane Couette flow Taylor Couette flow flows in straight coaxial annulus flows in curved pipes and ducts thermal convection flow viscoelastic flow and magnet fluid flow etc The theory is in agreement with results from numerical simulations and experiments The analytical method used in this book is novel and is different from the traditional approaches This book includes the fundamental basics of flow stability and turbulent transition the essentials of the energy gradient theory and the applications of the theory to several practical problems This book is suitable for researchers and graduate students **The Mathematical-Function Computation Handbook** Nelson H.F. Beebe,2017-08-20 This highly comprehensive handbook provides a substantial advance in the computation of elementary and special functions of mathematics extending the function coverage of major programming languages well beyond their international standards including full support for decimal floating point arithmetic Written with

clarity and focusing on the C language the work pays extensive attention to little understood aspects of floating point and integer arithmetic and to software portability as well as to important historical architectures It extends support to a future 256 bit floating point format offering 70 decimal digits of precision Select Topics and Features references an exceptionally useful author maintained MathCW website containing source code for the book s software compiled libraries for numerous systems pre built C compilers and other related materials offers a unique approach to covering mathematical function computation using decimal arithmetic provides extremely versatile appendices for interfaces to numerous other languages Ada C C Fortran Java and Pascal presupposes only basic familiarity with computer programming in a common language as well as early level algebra supplies a library that readily adapts for existing scripting languages with minimal effort supports both binary and decimal arithmetic in up to 10 different floating point formats covers a significant portion with highly accurate implementations of the U S National Institute of Standards and Technology s 10 year project to codify mathematical functions This highly practical text reference is an invaluable tool for advanced undergraduates recording many lessons of the intermingled history of computer hardw are and software numerical algorithms and mathematics In addition professional numerical analysts and others will find the handbook of real interest and utility because it builds on research by the mathematical software community over the last four decades *Formal Methods and Software Engineering* Kazuhiro Ogata,Mark Lawford,Shaoying Liu,2016-10-31 This book constitutes the refereed proceedings of the 18th International Conference on Formal Engineering Methods ICFEM 2016 held in Tokyo Japan in November 2016 The 27 revised full papers presented together with three invited talks were carefully reviewed and selected from 64 submissions The conference focuses in all areas related to formal engineering meth ods such as verification and validation software engineering formal specification and modeling software security and software reliability **Algebraic Geometry Codes: Advanced Chapters** Michael Tsfasman,Serge Vlăduţ,Dmitry Nogin,2019-07-02 Algebraic Geometry Codes Advanced Chapters is devoted to the theory of algebraic geometry codes a subject related to local_libraryBook Catalogseveral domains of mathematics On one hand it involves such classical areas as algebraic geometry and number theory on the other it is connected to information transmission theory combinatorics finite geometries dense packings and so on The book gives a unique perspective on the subject Whereas most books on coding theory start with elementary concepts and then develop them in the framework of coding theory itself within this book systematically presents meaningful and important connections of coding theory with algebraic geometry and number theory Among many topics treated in the book the following should be mentioned curves with many points over finite fields class field theory asymptotic theory of global fields decoding sphere packing codes from multi dimensional varieties and applications of algebraic geometry codes The book is the natural continuation of Algebraic Geometric Codes Basic Notions by the same authors The concise exposition of the first volume is included as an appendix
