

### 3.2 EQUATIONS OF PERTURBED LONGITUDINAL MOTION; CATEGORIES OF PROBLEMS IN FLIGHT DYNAMICS

We can anticipate most flight-dynamic phenomena, whose analysis will occupy us later, by reference to time-dependent disturbances superimposed on trimmed flight. Still restricting ourselves to longitudinal motion, we portray in Fig. 3.5 one instant along a trajectory that might have been produced by a sudden application of elevator control, by a change in the throttle setting, or by encountering a gust. We adopt stability axes and the simplifying assumption that resultant thrust  $T$  always acts in the positive  $x$ -direction through the CM.

Fig. 3.5. Flight vehicle in a condition of perturbed longitudinal motion.

Figure 3.5 reproduces several quantities that have already been discussed, including the Euler angle  $\Theta$ . Also shown is angle of attack perturbation  $\alpha(t)$ . We expect that the various airloads are determined by the momentary angle  $[\alpha_{ZL_0} + \alpha]$ . In view of the unsteady motion, however, they are sometimes affected by the previous history of  $\alpha(t)$ ,  $v_c(t)$ , and possibly  $\Theta(t)$ . A simple rotational transformation about  $y$  gives the force components for (2.40) in terms of lift and drag.

$$X = T - D \cos \alpha + L \sin \alpha \quad (3.8a)$$

$$Z = -D \sin \alpha - L \cos \alpha \quad (3.8b)$$

**Analysis and Design of Flight Vehicle Structures** Elmer Franklin Bruhn, 1965 *Automatic Control of Atmospheric and Space Flight Vehicles* Ashish Tewari, 2011-08-04 Automatic Control of Atmospheric and Space Flight Vehicles is perhaps the first book on the market to present a unified and straightforward study of the design and analysis of automatic control systems for both atmospheric and space flight vehicles Covering basic control theory and design concepts it is meant as a textbook for senior undergraduate and graduate students in modern courses on flight control systems In addition to the basics of flight control this book covers a number of upper level topics and will therefore be of interest not only to advanced students but also to researchers and practitioners in aeronautical engineering applied mathematics and systems control theory **Flight Dynamics and Control of Aero and Space Vehicles** Rama K. Yedavalli, 2019-11-01 Flight Vehicle Dynamics and Control Rama K Yedavalli The Ohio State University USA A comprehensive textbook which presents flight vehicle dynamics and control in a unified framework Flight Vehicle Dynamics and Control presents the dynamics and control of various flight vehicles including aircraft spacecraft helicopter missiles etc in a unified framework It covers the fundamental topics in the dynamics and control of these flight vehicles highlighting shared points as well as differences in dynamics and control issues making use of the systems level viewpoint The book begins with the derivation of the equations

of motion for a general rigid body and then delineates the differences between the dynamics of various flight vehicles in a fundamental way. It then focuses on the dynamic equations with application to these various flight vehicles concentrating more on aircraft and spacecraft cases. Then the control systems analysis and design is carried out both from transfer function classical control as well as modern state space control points of view. Illustrative examples of application to atmospheric and space vehicles are presented emphasizing the systems level viewpoint of control design. Key features: Provides a comprehensive treatment of dynamics and control of various flight vehicles in a single volume. Contains worked out examples including MATLAB examples and end of chapter homework problems. Suitable as a single textbook for a sequence of undergraduate courses on flight vehicle dynamics and control. The book is essential reading for undergraduate students in mechanical and aerospace engineering, engineers working on flight vehicle control and researchers from other engineering backgrounds working on related topics.

**Aeroacoustics of Flight Vehicles** Harvey H. Hubbard, 1991      **Structural Failure Analysis and Prediction Methods for Aerospace Vehicles and Structures** Sook-Ying Ho, 2010. This book deals with structural failure induced by mechanical aerodynamic acoustic and aero thermal loads etc of modern aerospace vehicles in particular high speed aircraft solid propellant rocket systems and hypersonic flight vehicles where structural integrity failure prediction and service life assessment are particularly challenging due to the increasingly more demanding mission requirements and the use of non traditional materials such as non metallic composites in their construction. Prediction of the complex loading environment seen in high speed operation and constitutive fracture models which can adequately describe the non linear behaviour exhibited by advanced alloys and composite materials are critical in analyzing the non linear structural response of modern aerospace vehicles and structures. The state of the art of the different structural integrity assessment and prediction methodologies including non destructive structural health monitoring techniques used for the structural design service life assessment and failure analysis of the different types of aerospace vehicles are presented. The chapters are written by experts from aerospace defence research organizations and academia in the fields of solid mechanics and structural mechanics and dynamics of aircraft rocket and hypersonic systems. The book will serve as a useful reference document containing specialist knowledge on appropriate prediction methodologies for a given circumstance and experimental data acquired from multi national collaborative programs.
