The Visual Language of Technique Luigi Cocchiarella, 2015-03-19 The book is inspired by the third seminar in a cycle connected to the celebrations of the 150th anniversary of the Politecnico di Milano July 2013 Educating by Image Teaching Styles vs Learning Styles was the motto of this meeting The contributions coming from lectures the poster session interviews and round table aim to propose an updated look at visual education highlighting how digital tools and networks have profoundly affected the representational styles of the teachers and the cognitive styles of the learners while at the same time reaffirming the importance of the interaction between the two groups As Herbert Alexander Simon once said Learning results only from what the student does and thinks therefore the teacher can advance learning only by influencing what the student does to learn That is no mean feat if we consider that according to Benjamin Samuel Bloom visual education not only involves the pure cognition but also the affective and the psychomotor domains not to mention the social aspects This is why alongside some theoretical and historical retrospectives the contributions recommend a continuous revision of what and how could be included in the academic curricula also in connection with secondary schools the professional world targeted Lifelong Learning Programmes for students and teachers The volume includes an interview with the science journalist and writer Piero Angela Engineering Education John Heywood, 2006-01-24 A synthesis of nearly 2 000 articles to help make engineers better educators While a significant body of knowledge has evolved in the field of engineering education over the years much of the published information has been restricted to scholarly journals and has not found a broad audience This publication rectifies that situation by reviewing the findings of nearly 2 000 scholarly articles to help engineers become better educators devise more effective curricula and be more effective leaders and advocates in curriculum and research

development The author s first objective is to provide an illustrative review of research and development in engineering education since 1960 His second objective is with the examples given to encourage the practice of classroom assessment and research and his third objective is to promote the idea of curriculum leadership The publication is divided into four main parts Part I demonstrates how the underpinnings of education history philosophy psychology sociology determine the aims and objectives of the curriculum and the curriculum s internal structure which integrates assessment content teaching and learning Part II focuses on the curriculum itself considering such key issues as content organization trends and change A chapter on interdisciplinary and integrated study and a chapter on project and problem based models of curriculum are included Part III examines problem solving creativity and design Part IV delves into teaching assessment and evaluation beginning with a chapter on the lecture cooperative learning and teamwork The book ends with a brief insightful forecast of the future of engineering education Because this is a practical tool and reference for engineers each chapter is self contained and may be read independently of the others Unlike other works in engineering education which are generally intended for educational researchers this publication is written not only for researchers in the field of engineering education but also for all engineers who teach All readers acquire a host of practical skills and knowledge in the fields of learning philosophy sociology and history as they specifically apply to the process of engineering curriculum improvement and evaluation
