Edward J. Haug, Roderic C. Deyo, 2013-06-29 This book contains the edited versions of lectures and selected contributed papers presented at the NATO Advanced Research Workshop on Real Time Integration Methods For Mechanical System Simulation held in Snowbird Utah August 7 11 1989 The Institute was attended by 42 participants from 9 countries including leading mathematicians and engineers from universities research institutions and industry The majority of participants presented either invited or contributed papers during the Institute and everyone participated in lively discussions on scientific aspects of the program The Workshop provided a forum for investigation of promising new directions for solution of differential algebraic equations DAE of mechanical system dynamics by mathematicians and engineers from numerous schools of thought The Workshop addressed needs and opportunities for new methods of solving of DAE of mechanical system dynamics from the perspective of a broad range of engineering and scientific applications Among

the most exciting new applications addressed was real time computer simulation of mechanical systems that for the first time in human history permits operator in the loop simulation of equipment that is controlled by the human e g driving a vehicle operating a space telerobot operating a remote manipulator and operating construction equipment The enormous potential value of this new application and the fact that real time numerical integration methods for DAE of mechanical system dynamics is the pacing problem to be solved in realizing this potential served to focus much of the discussion at the Workshop

Computer Aided Analysis and Optimization of Mechanical System Dynamics E. J. Haug, 2013-06-29
These proceedings contain lectures presented at the NATO NSF ARO sponsored Advanced Study Institute on Computer Aided Analysis and Optimization of Mechanical System Dynamics held in Iowa City Iowa 12 August 1983 Lectures were presented by free world leaders in the field of machine dynamics and optimization Participants in the Institute were specialists from throughout NATO many of whom presented contributed papers during the Institute and all of whom participated actively in discussions on technical aspects of the subject The proceedings are organized into five parts each addressing a technical aspect of the field of computational methods in dynamic analysis and design of mechanical systems The introductory paper presented first in the text outlines some of the numerous technical considerations that must be given to organizing effective and efficient computational methods and computer codes to serve engineers in dynamic analysis and design of mechanical systems Two substantially different approaches to the field are identified in this introduction and are given attention throughout the text The first and most classical approach uses a minimal set of Lagrangian generalized coordinates to formulate equations of motion with a small number of constraints The second method uses a maximal set of cartesian coordinates and leads to a large number of differential and algebraic constraint equations of rather simple form These fundamentally different approaches and associated methods of symbolic computation numerical integration and use of computer graphics are addressed throughout the proceedings
