Frontiers of Fluid Mechanics Shen Yuan, 2013-10-22 Frontiers of Fluid Mechanics documents the proceedings of the Beijing International Conference on Fluid Mechanics held in Beijing People's Republic of China 1-4 July 1987. The aims of the conference were to provide a forum for a cross-sectional review of the state of the art and new advances in various branches of fluid mechanics and to promote the exchange of ideas by experts from different parts of the world. The contributions made by researchers at the conference are organized into 18 parts. Part 1 presents invited lectures covering topics such as separated flow, porous flow, and turbulence modeling. Part 2 contains papers dealing with turbulence. Parts 3, 4, and 5 include studies on flow stability and transition, transonic flow, and boundary layer flows and shock waves, respectively. Part 6 is devoted to aerodynamics and gas dynamics. Part 7 examines water waves, while Part 8 is devoted to hydrodynamics and hydraulics. The papers in Part 9 examine bubbles and drops. Part 10 deals with experiments involving vortices, jets, wakes, and cavities. Part 11 contains studies on geophysical and astrophysical fluid mechanics. Parts 12 and 13 investigate two-phase flow and flow through porous media and non-Newtonian flow, respectively. Part 14 takes up magneto hydrodynamics and physico-chemical flow. Part 15 covers biofluid mechanics. Part 16 contains papers on industrial and environmental fluid mechanics, while Part 17 deals with heat transfer. Part 18 contains papers that were received after the conference.

Natural Capital Peter Kareiva, 2011-04-07 In 2005 The Millennium Ecosystem Assessment MA provided the first global assessment of the world s ecosystems and ecosystem services It concluded that recent trends in ecosystem change threatened human wellbeing due to declining ecosystem services This bleak prophecy has galvanized conservation organizations ecologists and economists to work toward rigorous valuations of ecosystem services at a spatial scale and with a resolution that can inform public policy The editors have assembled the world s leading scientists in the fields of conservation policy analysis and resource economics to provide the most intensive and best technical analyses of ecosystem services to date A key idea that guides the science is that the modelling and valuation approaches being developed should

use data that are readily available around the world In addition the book documents a toolbox of ecosystem service mapping modeling and valuation models that both The Nature Conservancy and the World Wide Fund for Nature WWF are beginning to apply around the world as they transform conservation from a biodiversity only to a people and ecosystem services agenda The book addresses land freshwater and marine systems at a variety of spatial scales and includes discussion of how to treat both climate change and cultural values when examining tradeoffs among ecosystem services **Nuclear Science**
