Gross,Joe Harris,2004 The Magic of Numbers was written with two goals in mind first to introduce the reader to some of the
beauty of numbers the patterns in their behavior that have fascinated mathematicians for millennia and some surprising
applications of those patterns second and equally important to teach the reader something of the mathematical mode of
thought the feeling of exploration excitement and discovery that are part of how mathematics is developed The book written
originally for the course Quantitative Reasoning 28 that the authors developed and taught at Harvard draws the reader into
the content through an engaging and informal writing style Example driven it reduces to a minimum the abstract notation
and formal argument that often creates a barrier between mathematicians and students focusing more instead on the
experimental aspect of the subject Above all the authors communicate to the reader a sense of the joy and fascination of
learning mathematics Additional exercises problems and sample exams are available at www.prenhall.com/gross Principal
topics include Counting and basic combinatorics with applications to probability and games The arithmetic of natural
numbers the Euclidean Algorithm and the unique factorization theorem Modular arithmetic including Fermat's Theorem
Euler's Theorem and how to take powers and roots Codes how the special properties of ordinary and modular arithmetic in
combination allow us to construct the public key codes that help make data transmission secure *El-Hi Textbooks and*
