The Switch

The switch is one of the most important parts of an electrical circuit, as they control when, where, and how electricity flows. A switch is a very simple device that electricity has to flow through a complete loop (a circuit) to work. A switch can be open and close that loop.

Symbol for a Switch

It almost looks like the draw bridge on a castle, as a bridge that opens for ships. When the bridge is up, and no nothing can cross it. When the bridge is down, traffic can flow as normal. A switch is a bit like that. When the switch is open, no electricity can flow. When the switch is closed, electricity can flow. Remember the flashlight circuit you worked on in lesson 1? Switches are a key part of a flashlight, and so it is back to the drawing board for that circuit. Using the materials, rebuild your flashlight circuit so that you can turn the flashlight on and off using a switch.

Once you have got that done, please draw your circuit diagram in the box below. Once you have got a working circuit and a completed diagram, your teacher will give you their 'stamp of approval'.

Did you know you can make your own switch?

Take a look at that circuit diagram again. When three wires come together in one point, they connect at two points (called terminals) with the middle connector open during the circuit. If you take a close look at the switch, your teacher gave you, you should see the switch making that bridge between the terminals. To make a switch, you need two terminals for the rest of the circuit to connect to, a connector that can either bridge or open that gap.
