Students' Reasoning in Precalculus: Covariational Explorations Enriched by Rates of Change and Limits Andrzej Sokolowski, 2024-12-09 This book aims to develop high school and undergraduate students covariational reasoning and algebraic skills to succeed in calculus and STEM subjects The book reflects on contemporary research in math education where students explore algebraic tools and reason mathematically to construct new knowledge The volume is made up of six chapters covering polynomial rational and transcendental functions An early introduction of limits to support the analyses of linear functions progresses to other book chapters ensuring consistency parallelism and a scaffold knowledge delivery A gradual introduction to function rates of change along with function monotonicity and concavity intertwines with modeling techniques that merge students mathematical reasoning with scientific contexts A forthcoming online component of the book consists of ready to download exploratory modeling activities and worksheets that further solidify students fluency in understanding how to apply abstract math concepts to gain a deeper understanding of natural and social sciences

Elements of Mathematics for Economics and Finance Vassilis C. Mavron, Timothy N. Phillips, 2023-11-20 Based on over 15 years experience in the design and delivery of successful first year courses this book equips undergraduates with the mathematical skills required for degree courses in economics finance management and business studies The book starts with a summary of basic skills and takes its readers as far as constrained optimisation helping them to become confident and competent in the use of mathematical tools and techniques that can be applied to a range of problems in economics and finance Designed as both a course text and a handbook the book assumes little prior mathematical knowledge beyond elementary algebra and is therefore suitable for students returning to mathematics after a long break The fundamental ideas

are described in the simplest mathematical terms highlighting threads of common mathematical theory in the various topics Features of the book include a systematic approach ideas are touched upon introduced gradually and then consolidated through the use of illustrative examples several entry points to accommodate differing mathematical backgrounds numerous problems with full solutions and exercises to illustrate the theory and applications key learning objectives and self assessment questions provided for each chapter full solutions to exercises available to lecturers via the Springer Nature Extramaterial Lecturer Material website Vass Mavron is Emeritus Professor of Mathematics at Aberystwyth University Tim Phillips is Professor of Applied Mathematics in the School of Mathematics at Cardiff University *Bookseller and the Stationery Trades' Journal*, 1904 **Bookseller**, 1877 Vols for 1871 76 1913 14 include an extra number The Christmas bookseller separately paged and not included in the consecutive numbering of the regular series **Precalculus** Cynthia Y.
