

Extending Dilations KEY

Dilations with the Center of Dilation not at the Origin

- On a sheet of grid paper, plot triangle ABC with a colored pencil with the following vertices. A(2, 6), B(8, 7) and C(4, 4).
- Plot point P(8, 2). This will be the center of dilation.
- Using point P, construct lines of extension through each of the three vertices.
- Dilate the figure by a scale factor of 2 using a different color pencil. Use the table below to record your findings.

| Original Figure | | Image Dilated by Scale Factor of 2 with Center Of Dilation at P(8, 2). | |
|-----------------|-------------|--|-------------|
| Point | Coordinates | Point | Coordinates |
| A | (2, 6) | A' | (-4, 10) |
| B | (8, 7) | B' | (8, 12) |
| C | (4, 4) | C' | (0, 6) |

- In the previous activity, you discovered that if some point (x, y) was dilated by a scale factor of some real number r with the origin as the center of dilation, then the resulting image point had coordinates $(r \cdot x, r \cdot y)$. In other words, as long as the origin was the center of dilation, image points could be found by multiplying the original coordinates by the scale factor of dilation. Does that work for the data in the table above? Explain.
No, because the image of (2, 6) is not (4, 12) and the image of (8, 7) is not (16, 14) and etc.
- Suppose you multiplied each of the original coordinates by a scale factor of 2. Complete the table below and respond to the questions that follow.

| Original Figure | | Coordinates of Original Figure Doubled $(2 \cdot x, 2 \cdot y)$ | Actual coordinates of image Dilated by Scale Factor of 2 with Center Of Dilation at P(8, 2) |
|-----------------|-------------|---|---|
| Point | Coordinates | | |
| A | (2, 6) | (4, 12) | (-4, 10) |
| B | (8, 7) | (16, 14) | (8, 12) |
| C | (4, 4) | (8, 8) | (0, 6) |

- Notice that multiplying the coordinates of A(2, 6) by 2 gives (4, 12). How different is the x coordinate from the actual coordinate? What about the x coordinates for the other points? How different are they from the actual coordinates?
All x -coordinates from the image have a difference of 8 from the original.
- Notice that multiplying the coordinates of A(2, 6) by 2 gives (4, 12). How different is the y coordinate from the actual coordinate? What about the y coordinates for the other points? How different are they from the actual coordinates?
All y -coordinates from the image have a difference of 2 from the original.

Wavelets and Multiscale Analysis Jonathan Cohen, Ahmed I. Zayed, 2011-03-01 Since its emergence as an important research area in the early 1980s the topic of wavelets has undergone tremendous development on both theoretical and applied fronts Myriad research and survey papers and monographs have been published on the subject documenting different areas of applications such as sound and image processing denoising data compression tomography and medical imaging The study of wavelets remains a very active field of research and many of its central techniques and ideas have evolved into new and promising research areas This volume a collection of invited contributions developed from talks at an international conference on wavelets is divided into three parts Part I is devoted to the

Quantum Systems under Gravitational Time Dilation Magdalena Zych, 2017-02-06 This thesis introduces a new theoretical tool to explore the notion of time and temporal order in quantum mechanics the relativistic quantum clock framework It proposes novel thought experiments showing that proper time can display quantum features e g when a clock runs different proper times in superposition The resulting new physical effects can be tested in near future laboratory experiments with atoms molecules and photons as clocks The notion of time holds the key to the regime where quantum theory and general relativity overlap which has not been directly tested yet and remains largely unexplored by the theory The framework also applies to scenarios in which causal relations between events become non classical and which were previously considered impossible to address without refuting quantum theory The relativistic quantum clock framework offers new insights into the foundations of quantum theory and general relativity
