Analysis of G/LEO Kinetic Bombardment and Application to National Security Strategies for Full-Spectrum Military Interoperability Ramsey Elbasheer, 2014-05-01 The objective of this study centralized on the analysis of a kinetic bombardment long rod penetrator system and its evident processes ramifications and applications Applications spanned three broad operational intentions deep bunker breach intercontinental strike capability and preeminence over terrestrial forces without matched investment The ambition of a viable Kinetic Bombardment Orbital Mechanism KBOM is for the cost in its entirety from being put into orbit to maintenance and ejecting payloads to be less than or equal to the same amount of marginal effort required to build maintain and launch the required number of ICBMs to complete a given set of tactical objectives Eleven potential Kinetic Bombardment Rod KBR configurations were initially developed varying between two forms standard tungsten carbide rods and tungsten carbide rods equipped with thermobaric warheads Through an Analysis of Alternatives AoA down select process a final standard tungsten carbide rod composition was selected for use as a case example for further investigation It is concluded that as policies are shaped to allow less restricted military activity in space kinetic bombardment systems will be acquired in response to distinct international events or threats Peer nations seeking to

match U S general terrestrial forces without matching U S investment may also look to acquire orbital defense satellites In regards to nations such as the United States that already own weapons effective against all classes of targets kinetic bombardment systems will only become viable prospects once launch costs decline with the development of reusable launch vehicles This study makes the beginning but surely not the whole case for the long pursued concept of orbital defense satellites as the obstacles that once stood in the way recede While it does not however suggest or constitute the immediate development of such a project it perhaps constitutes its future consideration

Behavioural Ecology of Western Palearctic Falcons Giovanni Leonardi, 2020-12-07 This monograph is the result of eight years of bibliographical and field research concerning several behavioural ecology aspects of the Palearctic falcons For a while this book grew along with The Lanner falcon published in 2015 and revised in 2017 In both books the main aim was to provide a clear overview of the biology and ecology of these species In fact in the last 20 years the number of publications on falcons has grown tremendously and in parallel also those belonging to the so called grey literature The number of people involved is also increased by including both academics and nature lovers Many previously published books emphasized identification and offered little insights on the behavioural and ecological aspects of the species Very often the research on behavioural ecology remains closed within the confines of academic community By contrast a multitude of basic data is scattered in countless articles published in local magazines Many falcon species are easy to observe and study such as kestrels but others are more rare and localized In order to understand the survival strategies adopted by this group of avian predators it is necessary not to lose sight of the overall picture This book tries to explain the different survival strategies by examining through a few essential chapters some crucial aspects for all species The first chapter provides information on the genus *Falco* its genetics evolution and morphological peculiarities The other chapters deal with reproductive strategies competition exploitation of resources dispersal patterns communication and sociality One of the main objectives of this book is to produce an accessible but scholarly curated source of reference By understanding the most common species it is possible to provide a working framework for rarer and especially threatened falcon species
