Contexts of Learning Mathematics and Science Sarah J. Howie, Tjeerd Plomp, 2006-04-18 This book is the result of research from over fifteen countries asking which background and environmental factors influence achievement in mathematics and science This research is based on data from the Third International Mathematics and Science Study TIMSS which was conducted under the auspices of the International Association for the Evaluation of Educational Achievement IEA in 1995 and 1998 In many countries researchers have started secondary analysis of the data in search for relationships between contextual factors and achievement In these analyses two different approaches can be distinguished which can be characterised by the metaphors of fishing and hunting In the fishing approach researchers begin with an open mind considering all possible context variables as potentially influential Applying analysis techniques such as regression analysis Lisrel PLS HLM and MLN they then identify important factors within their countries or across a number of countries In the hunting approach researchers hypothesise certain context variables and trace the effect of these variables on mathematics and or science achievement

form and process **Making it comparable** David Waddington, Peter Nentwig, Sascha Schanze, 2007 One of the most significant developments in school education in recent years has been the development and introduction of standards a subject of considerable controversy This book is the result of a symposium held in Kiel a symposium that was arranged by two leading science education groups one at IPN Leibniz Institute for Science Education at the University of Kiel in Germany and the other at the University of York UK The seminar brought together experts from 15 countries These countries include those that have extensive experience with the effects of standards on the educational system on individual schools and teachers and on students Other reports concern countries which are introducing them shortly and yet others on countries that are in the early stages of development of standards 11 are from Europe and the others are from Australia Israel Taiwan and the U S The book is divided into three parts In Part A two of the organizers set the scene describing the reasons for arranging the symposium and outlining the preparations and the work done at the meeting Part B contains 17 reports from the 15 countries and in Part C there are two summaries analysing the conclusions taken from two different vantage points The controversies surrounding standards remain However this book gives a succinct and authoritative overall account of the advantages and disadvantages of their introduction taken from the experiences of many countries Science Indicators, 1985 Dilemmas of Science Teaching John Wallace, William Loudon, 2005-06-29 This book explores sixteen contemporary issues in science education by examining the practical dilemmas these issues provoke for teachers It is a unique book which presents student teachers with personal and professional insights into a whole range of science topics including the laws of science teaching ethics laboratories and culture gender and ethnicity Each chapter takes as its focus one of the sixteen issues and begins with a case study of a science lesson written by a practising teacher This is followed by a short reflective piece by the same teacher on how the lesson went and how opportunities for teaching and learning could be improved This reflection is followed by commentaries from some of the world's leading science educators on what they felt were the strengths and weaknesses of the lesson The extensive use of teacher written case studies and commentaries will make this book suitable for the pre service courses where case methods are typically used to provide a context for learning the craft of teaching The addition of commentaries from distinguished scholars makes the book relevant for postgraduate courses in science education and as a reference volume for teacher researchers Paper Qualification Syndrome (PQS) and Unemployment of School Leavers John Oxenham, 1982 *Annual Report on Education Statistics in Canada* Canada. Development and Dilemmas in Science Education Peter J. Fensham, 1988 A summary of the strengths and weaknesses in present practices of science education in schools and of research in science education Annotation copyright Book News Inc Portland Or Science Education in Canada Christine D. Tippet, Todd M. Milford, 2019-07-01 This book offers a meso level description of demographics science education and science teacher education Representing all 13 Canadian jurisdictions the book provides local insights that serve as the basis for exploring the Canadian system as a whole and function as a common starting point from which to identify causal relationships that may be associated with Canada's successes The book highlights commonalities consistencies and distinctions across the provinces and territories in a thematic analysis of the 13 jurisdiction specific chapters Although the analysis indicates a network of policy and practice issues warranting further consideration the diverse nature of Canadian science education makes simple identification of causal relationships elusive Canada has a reputation for strong science achievement However there is currently limited literature on science education in Canada at the general level or in specific areas such as Canadian science curriculum or science teacher education This book fills that gap by presenting a thorough description of science education at the provincial territorial level as well as a more holistic description of pressing issues for Canadian science education

Educating Americans for the 21st Century National Science Board (U.S.). Commission on Precollege Education in Mathematics, Science, and Technology, 1983 *Complexity and Simplicity in Science Education* David Geelan, Kim Nichols, Christine V. McDonald, 2022-01-25 This edited volume brings together a broad range of international science education studies focusing on the interplay of teaching and learning science It recognizes the complexity present in today's education associated with major science related issues faced by society such as climate change diseases and pandemics global conflicts over energy food and water The studies discussed in this volume are focused on presenting different opportunities to teach these convoluted matters in order to find simplicity within the complexity and make it accessible to learners They bring together the challenges of preparing the students of today to become scientifically informed citizens of tomorrow

Educating Americans for the 21st Century: Source materials National Science Board (U.S.). Commission on Precollege Education in Mathematics, Science, and Technology, 1983 Leading experts in the fields of science mathematics and education present a plan for improving mathematics science and technology education for all American elementary and secondary students so that their achievement is the best in the world by 1995 The Commission believes that while individual American schools and students excel in science and mathematics the average American student is said to need a much firmer grounding at the elementary and secondary school levels It notes that the most serious problem is a severe shortage of qualified teachers Makes a number of recommendations and calls for stronger leadership on this issue through such means as a National Education Council reporting to the President
