High Paid Manual Jobs:

The Oxford Handbook of Job Quality Chris Warhurst, Chris Mathieu, Rachel E. Dwyer, 2022-06-20 The aim of this Handbook is to produce an interdisciplinary and international benchmark text for anyone wanting to understand job quality. Job quality matters and has long and continually done so even if the terminology used to describe it has and continues to vary. Debate about the future of work and job quality in the twenty first century centres on the impact of the new digital technologies of the putative fourth industrial revolution. This debate compounds existing concerns about the restructuring of employment and importantly a worrying proliferation of poor quality jobs often within the context of neo liberal political economic hegemony since the early 1980s or the economic crisis that followed the Global Financial Crisis of the late 2000s. Job quality is offered as a solution to challenges such as health welfare productivity innovation economic competitiveness democracy and democratic participation Bildung cultivation societal equality individual and collective quality of life and environmental sustainability. As job quality is a key factor in addressing these and the other challenges it needs to be understood in all its complexity in terms of what it affects as well as what affects it. This Handbook draws together into a single volume first an explicit focus on job quality both as a significant factor in and of itself and as producing instrumental effects on a range of other processes and outcomes second a catalogue of the diverse range of multiple contributions and applications related to job quality and third the complexity and multiple interpretations of the concept of job quality. Each chapter provides distinct responses to the question of why job quality matters coupled to a contention about for whom or for what job quality matters most. As the chapters with their respective answers and arguments attest there are a range of ways in which job quality is relevant to an equally broad range of social economic and political concerns.

Urban Inequality Owen Crankshaw, 2022-01-27 Based on new evidence that challenges existing theories of urban inequality Crankshaw argues that the changing pattern of earnings and occupational inequality in Johannesburg is better described by the professionalism of employment alongside high levels of chronic unemployment. Central to this examination is that the social polarisation hypothesis which is accepted

by many is simply wrong in the case of Johannesburg Ultimately Crankshaw posits that the post Fordist post apartheid period is characterised by a completely new division of labour that has caused new forms of racial inequality That racial inequality in the post apartheid period is not the result of the persistence of apartheid era causes but is the result of new causes that have interacted with the historical effects of apartheid to produce new patterns of racial inequality

Research on Future Skill Demands National Research Council,Division of Behavioral and Social Sciences and Education,Center for Education,2008-02-29 Over the past five years business and education groups have issued a series of reports indicating that the skill demands of work are rising due to rapid technological change and increasing global competition Researchers have begun to study changing workplace skill demands Some economists have found that technological change is skill biased increasing demand for highly skilled workers and contributing to the growing gap in wages between college educated workers and those with less education However other studies of workplace skill demands have reached different conclusions These differences result partly from differences in disciplinary perspective research methods and datasets The findings of all of these strands of research on changing skill demands are limited by available methods and data sources Because case study research focuses on individual work sites or occupations its results may not be representative of larger industry or national trends At a more basic level there is some disagreement in the literature about how to define skill In part because of such disagreements researchers have used a variety of measures of skill making it difficult to compare findings from different studies or to accumulate knowledge of skill trends over time In the context of this increasing discussion the National Research Council held a workshop to explore the available research evidence related to two important guiding questions What are the strengths and weaknesses of different research methods and data sources for providing insights about current and future changes in skill demands What support does the available evidence given the strengths and weaknesses of the methods and data sources provide for the proposition that the skills required for the 21st century workplace will be meaningfully different from earlier eras and will require corresponding changes in educational preparation
