An Assessment of the Highway Capacity Manual 2010 Roundabout Capacity Model

RAHMI AKÇELİK

REFERENCE:

R. AKÇELİK (2011). An Assessment of the Highway Capacity Manual 2010 Roundabout Capacity Model. *Paper presented at the International Roundabout Conference, Transportation Research Board, Carmel, Indiana, USA, 18-20 May 2011. Minor revision: 23 April 2012*

NOTE:

This paper is related to the intersection analysis methodology used in the SIDRA INTERSECTION software. Since the publication of this paper, many related aspects of the traffic model have been further developed in later versions of SIDRA INTERSECTION. Though some aspects of this paper may be outdated, this reprint is provided as a record of important aspects of the SIDRA INTERSECTION software, and in order to promote software assessment and further research.

Highway Capacity Manual 2010 Roundabouts:

The Highway Capacity Manual: A Conceptual and Research History Volume 2 Elena S. Prassas, Roger P.

Roess, 2020-01-08 Since 1950 the Highway Capacity Manual has been a standard used in the planning design analysis and operation of virtually any highway traffic facility in the United States It has also been widely used around the globe and has inspired the development of similar manuals in other countries This book is Volume II of a series on the conceptual and research origins of the methodologies found in the Highway Capacity Manual It focuses on the most complex points in a traffic system signalized and unsignalized intersections and the concepts and methodologies developed over the years to model their operations It also includes an overview of the fundamental concepts of capacity and level of service particularly as applied to intersections The historical roots of the manual and its contents are important to understanding current methodologies and improving them in the future As such this book is a valuable resource for current and future users of the Highway Capacity Manual as well as researchers and developers involved in advancing the state of the art in the field

Intersections Control and Safety Antonio Pratelli, 2013-05-22 Starting off a new series on Transport Systems and Traffic Engineering the book aims to help bridge the gap between research and practice encouraging a critical dialogue in different specific subjects spanning innovation development and technology transfer Those who offer innovation often do not meet the immediate needs of practitioners especially in the traditional field of civil engineering Still the adequate diffusion of research results and wisdom derived from practical experience are crucial to both theoretical underpinnings and technical applications The papers forming this book are devoted to intersection control and safety and have been selected bearing in mind the criteria stated above That is these papers provide both scholarly contribution as well as vision for application As a general rule about one third of all highway crashes happen at intersections This rule holds for many different countries Intersection crashes also represent a significant portion of serious injury crashes and by right are receiving considerable attention from researchers and practitioners alike This book is therefore devoted to relevant safety aspects of road intersections and innovative features in design and operations that may address the intersection crash problem The thirteen papers are more or less equally devoted to roundabouts and signals These papers cover many of the most recent and emerging issues related to intersection control and safety Topics range from design details to driver perception from pedestrians behaviour to signal timing and from capacity models to red light running The book will be useful for those wishing to expand their knowledge of this ever important subject area

Recent Advances in Traffic Engineering for Transport Networks and Systems Elżbieta Macioszek, Grzegorz Sierpiński, 2017-08-01 This book is a collation of numerous valuable guidelines for making decisions based on recent advances and improvement of transport systems Offering know how and discussing practical examples as well as decision making support systems it is of interest of those who face the challenge of seeking solutions to contemporary transport system problems on a daily basis including local authorities involved in

planning and preparation of development strategies for specific transport related areas in both urban and regional dimension as well as representatives of business and industry who participate directly in the implementation of traffic engineering solutions The guidelines are provided in individual chapters making it possible to address the given problem in an advanced manner and simplify the choice of appropriate strategies including those related to increasing competitiveness of public transport identifying bus lines to potentially be serviced by electric buses pedestrian traffic solutions developing bike sharing systems safety conditions in road tunnels integrating supply chains or route planning support by means of technologically advanced systems and applications On the other hand since the book also addresses the new approach to theoretical models including traffic flow surveys and measurements transport behaviours capacity models delay modelling and road condition modelling it appeals to researchers and scientists studying this body of problems The book entitled Recent Advances in Traffic Engineering for Transport Networks and Systems includes selected papers submitted to and presented at the 14th Scientific and Technical Conference Transport Systems Theory and Practice organised by the Department of Transport Systems and Traffic Engineering at the Faculty of Transport of the Silesian University of Technology The conference was held on 18-20 September 2017 in Katowice Poland

Alternative Types of Roundabouts Tomaž Tollazzi, 2014-11-07 This book presents a history of roundabouts an introduction to their design calculations of their capacity and traffic safety features It describes the key features of standard roundabouts and their limitations Alternative types of roundabouts are a fairly recent development and have only been implemented in a few countries to date The book illustrates a broad variety of these recent alternative types of roundabouts as well as proposed types still in the development phase explaining for each the specific needs it meets its advantages and drawbacks In closing the book offers an outlook on the role of roundabouts in future street traffic

ICSECM 2019 Ranjith Dissanayake, Priyan Mendis, Kolita Weerasekera, Sudhira De Silva, Shiromal Fernando, 2020-09-18 This book highlights current research and developments in the area of Structural Engineering and Construction Management which are important disciplines in Civil Engineering It covers the following topics and categories of Structural Engineering The main chapters sections of the proceedings are Structural and Solid Mechanics Construction Materials Systems and Management Loading Effects Construction Safety Architecture Architectural Engineering Coastal Engineering Foundation engineering Materials Sustainability The content of this book provides necessary knowledge for construction management practices new tools and technologies on local and global levels in civil engineering which can mitigate the negative effects of built environment

Roundabouts as Safe and Modern Solutions in Transport Networks and Systems Elżbieta Macioszek, Rahmi Akçelik, Grzegorz Sierpiński, 2018-07-31 This book offers a collection of guidelines that will be particularly useful to those making decisions concerning roundabouts as safe and modern solutions in transport networks and systems The decision making support systems described here will interest those who face the challenge of finding solutions to problems concerning modern transport systems on a daily basis Consequently the book is

chiefly intended for local authorities involved in planning and preparing development strategies for specific transport related issues in both urban and regional contexts as well as for representatives of business and industry who are directly engaged in the implementation of traffic engineering solutions The guidelines provided in the respective chapters help to address the given problem soundly and to simplify the selection of an appropriate strategy The topics covered include traffic conditions and the performance of single lane two lane and turbo roundabouts road traffic safety analysis analysis of road traffic safety improvements surrogate safety measures at roundabouts analysis of pedestrian behavior at pedestrian crossings with public transport vehicles methods for assessing vehicle motion trajectory at single lane roundabouts using visual techniques making compact two lane roundabouts effective for vulnerable road users concepts for wireless electric vehicle charging near roundabouts work zones and temporary traffic control at roundabouts Since the book also considers new approaches to theoretical models including modeling roundabout capacity models of critical gaps and follow up headways for turbo roundabouts and estimating roundabout delay while taking into account pedestrian impact it will also appeal to researchers and scientists studying these problems The book gathers selected papers presented at the 15th Scientific and Technical Conference Transport Systems Theory and Practice organized by the Department of Transport Systems and Traffic Engineering Silesian University of Technology in Katowice Poland on September 17 19 2018

Roundabouts Lee August Rodegerdts, National Cooperative Highway Research Program, 2010 TRB's National Cooperative Highway Research Program NCHRP Report 672 Roundabouts An Informational Guide Second Edition explores the planning design construction maintenance and operation of roundabouts The report also addresses issues that may be useful in helping to explain the trade offs associated with roundabouts This report updates the U S Federal Highway Administration's Roundabouts An Informational Guide based on experience gained in the United States since that guide was published in 2000

An Introduction to Traffic Flow Theory Lily Elefteriadou, 2024-04-20 This second edition of An Introduction to Traffic Flow Theory adds new material in several chapters related to advanced technologies including autonomy the use of sensors and communications and particularly congestion mitigation solutions that leverage connected and autonomous vehicles CAVs It also includes a new chapter that briefly outlines several mathematical analysis techniques commonly used in traffic flow theory aiming to introduce students to some of the most frequently used tools available for traffic operational related analysis This new edition also includes several updates related to the most recent versions of the Highway Capacity Manual and the Green Book This textbook is meant for use in advanced undergraduate graduate level courses in traffic flow theory with prerequisites including two semesters of calculus statistics and an introductory course in transportation The text would also be of interest to transportation professionals as a refresher in traffic flow theory or as a reference Students and engineers of diverse backgrounds will find this text accessible and applicable to today's traffic issues This text provides a comprehensive and concise treatment of the topic of traffic flow theory and includes several topics relevant to today's highway

transportation system It provides the fundamental principles of traffic flow theory as well as applications of those principles for evaluating specific types of facilities freeways intersections etc Newer concepts of Intelligent transportation systems ITS and their potential impact on traffic flow are discussed State of the art traffic flow research microscopic traffic analysis and traffic simulation have significantly advanced and are also discussed in this text Real world examples and useful problem sets complement each chapter

Calibration of the Hcm 2010 Roundabout Capacity Equations for Georgia Conditions

Christina Danielle Barry, 2012 There is increased interest in building modern roundabouts in Georgia and in the United States because of the safety and operational benefits that can be realized from this type of intersection With this interest comes the increasing need to be able to estimate the capacity that a roundabout can provide after it is built In the early 2000s a National Cooperative Highway Research Program NCHRP study was conducted that among other tasks developed single lane and multi lane roundabout capacity estimation equations These equations presented in the Highway Capacity Manual 2010 HCM 2010 can be calibrated using locally determined values of follow up headway and critical headway This study was designed to calibrate the HCM 2010 roundabout capacity equation for single lane roundabouts to driving conditions in Georgia In order to develop estimates of the calibration parameters video imagery was recorded for 13 approaches at six roundabouts in Georgia for approximately two hours during the peak period A total of 29 5 hours of video was recorded Data from three of these roundabouts forms the basis of this thesis The videos were processed by a Java program to collect time stamps that were subsequently used in Microsoft Excel to calculate the follow up and critical headway values required for calibration The values of critical headway and follow up headway that were found from the video data are presented in the results as well as the single lane capacity equations calibrated from the data Two types of analysis were done one that includes exiting vehicles and one that does not include exiting vehicles When exiting vehicles were excluded the weighted average of follow up and critical headway were found to be 3 46 and 4 17 seconds respectively and when exiting vehicles were included in the analysis the weighted averages of the follow up and critical headway were found to be 2 80 seconds and 3 34 seconds respectively It was found that exiting vehicles do have an impact on the operations at the roundabout in most cases and including exiting vehicles in the analysis tends to increase the capacity predicted by the calibrated equations
