GEM HUNTER George Frangoulis, 2015-04-18 Gem hunting can be like playing the geological lottery. You may spend hours performing backbreaking work and pay fees for access to mine tailings only to find a few semiprecious stones that aren't worth much. Another person may randomly reach into a pile of dirt and pull out a diamond worth thousands of dollars. Looking for interesting gems and crystals can be a rewarding hobby even if you don't hit the jackpot. Many recreational gem hunters enjoy spending time outdoors learning about geology and hanging out with their gem hunting friends. Whether you're new to gem hunting or a seasoned pro, this new book provides in-depth information on some of the Earth's most sought-after precious and semi-precious gemstones.

Convicted Offender DNA Backlog Reduction Program Raymond J. Beaudet, 2010-10 Advances in DNA tech provide law enforcement with powerful new tools to identify suspects from biological evidence where older techniques could not. However, public and

private crime labs are not fully equipped to handle the increased demand for DNA. The increased demand for DNA analyses has caused a large backlog of unanalyzed DNA samples from convicted offenders and crime scenes. To aid in reducing this national backlog, the Dept of Justice funded the Convicted Offender DNA Backlog Reduction Program (BRP). This audit examines the BRP, which is designed to accelerate the analysis of convicted offender and arrestee DNA samples collected by states and to provide timely CODIS compatible data for state and national DNA databases.

Mathematical Modeling of the Learning Curve Charles I. Abramson, Igor Igorevich Stepanov, Riley J. Wincheski, 2024-06-17. The application of mathematical models in the analysis of learning data has a rich tradition in experimental psychology. Such modeling is not only of scientific interest from a psychophysiological point of view but very important from a clinical point of view because memory impairment is a common symptom that is frequently diagnosed in elderly people, persons after traumatic brain injury, patients with type 2 diabetes mellitus, Parkinson disease, multiple sclerosis, and other neurological and psychiatric diseases. Mild memory impairment might be one of the most important symptoms of a future Alzheimer's disease. Thus, early diagnosis of initial signs of memory impairment is of importance. The book offers the reader hands-on practical experience using a mathematical model developed by the senior authors. Classroom-tested experiments are provided, which requires the reader to use the model under various conditions such as learning and memory in both humans and animals. Following an introduction to mathematical models, the book contains 13 experiments. These experiments include those related to animal learning in such organisms as snails, bees, and rats. A variety of human experiments are also presented, including those related to short and long-term memory, maze learning, classical salivary conditioning, evaluation of sound on memory, and the influence of dietary supplements on memory. We close the section on experiments with an analysis of machine learning curves. Appendices are provided on how to build apparatus and how to install the software.

Chemists' Guide to Effective Teaching Norbert J. Pienta, Melanie M. Cooper, Thomas J. Greenbowe, 2005. For courses in Methods of Teaching Chemistry. Useful for new professors, chemical educators, or students learning to teach chemistry. Intended for anyone who teaches chemistry or is learning to teach it, this book examines applications of learning theories, presenting actual techniques and practices that respected professors have used to implement and achieve their goals. Each chapter is written by a chemist who has expertise in the area and who has experience in applying those ideas in their classrooms. This book is a part of the Prentice Hall Series in Educational Innovation for Chemistry.
