Proofs from THE BOOK Martin Aigner, Günter M. Ziegler, 2010-01-08 Paul Erdos liked to talk about The Book in which God maintains the perfect proofs for mathematical theorems following the dictum of G. H. Hardy that there is no permanent place for ugly mathematics Erdos also said that you need not believe in God but as a mathematician you should believe in The Book A few years ago we suggested to him to write up a first and very modest approximation to The Book He was enthusiastic about the idea and characteristically went to work immediately filling page after page with his suggestions Our book was supposed to appear in March 1998 as a present to Erdos 85th birthday With Paul's unfortunate death in the summer of 1996 he is not listed as a co author Instead this book is dedicated to his memory Paul Erdos We have no definition or characterization of what constitutes a proof from The Book all we offer here is the examples that we have selected hoping that our readers will share our enthusiasm about brilliant ideas clever insights and wonderful observations We also hope that our readers will enjoy this despite the imperfections of our exposition The selection is to a great extent influenced by Paul Erdos

himself A large number of the topics were suggested by him and many of the proofs trace directly back to him or were initiated by his supreme insight in asking the right question or in making the right conjecture So to a large extent this book reflects the views of Paul Erdos as to what should be considered a proof from The Book *Mathematics of Machine Learning* Tivadar Danka, 2025-05-30 Build a solid foundation in the core math behind machine learning algorithms with this comprehensive guide to linear algebra calculus and probability explained through practical Python examples Purchase of the print or Kindle book includes a free PDF eBook Key Features Master linear algebra calculus and probability theory for ML Bridge the gap between theory and real world applications Learn Python implementations of core mathematical concepts Book Description *Mathematics of Machine Learning* provides a rigorous yet accessible introduction to the mathematical underpinnings of machine learning designed for engineers developers and data scientists ready to elevate their technical expertise With this book you will explore the core disciplines of linear algebra calculus and probability theory essential for mastering advanced machine learning concepts PhD mathematician turned ML engineer Tivadar Danka known for his intuitive teaching style that has attracted 100k followers guides you through complex concepts with clarity providing the structured guidance you need to deepen your theoretical knowledge and enhance your ability to solve complex machine learning problems Balancing theory with application this book offers clear explanations of mathematical constructs and their direct relevance to machine learning tasks Through practical Python examples you will learn to implement and use these ideas in real world scenarios such as training machine learning models with gradient descent or working with vectors matrices and tensors By the end of this book you will have gained the confidence to engage with advanced machine learning literature and tailor algorithms to meet specific project requirements What you will learn Understand core concepts of linear algebra including matrices eigenvalues and decompositions Grasp fundamental principles of calculus including differentiation and integration Explore advanced topics in multivariable calculus for optimization in high dimensions Master essential probability concepts like distributions Bayes theorem and entropy Bring mathematical ideas to life through Python based implementations Who this book is for This book is for aspiring machine learning engineers data scientists software developers and researchers who want to gain a deeper understanding of the mathematics that drives machine learning A foundational understanding of algebra and Python and basic familiarity with machine learning tools are recommended
