*The Stability of Matter: From Atoms to Stars* Elliott H. Lieb, 2006-02-14 This fourth edition of selecta of my work on the stability of matter contains recent work on two topics that continue to fascinate me Quantum electrodynamics QED and the Bose gas Three papers have been added to Part VII on QED As I mentioned in the preface to the third edition there must be a way to formulate a non perturbative QED presumably with an ultraviolet cutoff that correctly describes low energy physics i e ordinary matter and its interaction with the electromagnetic field The new paper VII 5 which quantizes the results in V 9 shows that the elementary no pair version of relativistic QED using the Dirac operator is unstable when many body effects are taken into account Stability can be restored however if the Dirac operator with the field instead of the bare Dirac operator is used to define an electron Thus the notion of a bare electron without its self field is physically questionable
