Krieg,2019-07-11 Apply statistics to your everyday life Statistics and Data Analysis for Social Science helps students to build a strong foundational understanding of statistics by providing clarity around when and why statistics useful Rather than focusing on the how to of statistics author Eric J Krieg simplifies the complexity of statistical calculations by introducing only what is necessary to understanding each concept Every chapter is written around and applied to a different social problem or issues enabling students to broaden their imagination about the statistical tools that can be used to make sense of our world and maybe to make the world a better place In addition to updating all the tables and examples with new data the Second Edition has replaced the section on SPSS with three new sets of exercises at the end of each chapter Chapter Exercises for students complete during their reading and bring questions to class In Class Exercises that focus on the areas that students struggled with during their reading and Homework Exercises that can be assigned if students need extra practice with the concepts Research and Development in University Mathematics Education Viviane Durand-Guerrier,Reinhard Hochmuth,Elena Nardi,Carl Winsløw,2021-04-15 In the last thirty years or so the need to address the challenges of teaching and learning mathematics at university level has become increasingly appreciated by university mathematics teachers and beyond by educational institutions around the world Indeed mathematics is both a condition and an obstacle to success for students in many educational programmes vital to the 21st century knowledge society for example in pure and applied mathematics engineering natural sciences technology economics finance management and so on This breadth of impact of mathematics implies the urgency of developing research in university mathematics education and of sharing results of this research widely This book provides a bespoke opportunity for an international audience of researchers in didactics of mathematics mathematicians and any teacher or researcher with an interest in this area to be informed about state of the art developments and to heed future research agendas This book emerged from the activities of the research project INDRUM acronym for International Network for Didactic Research in University Mathematics which aims to contribute to the development of research in didactics of mathematics at all levels of tertiary education with a particular concern for the development of early career researchers in the field and for dialogue with university mathematicians The aim of the book is to provide a deep synthesis of the research field as it appears through two INDRUM conferences organised in 2016 and 2018 It is an original contribution which highlights key research perspectives addresses seminal theoretical and methodological issues and reports substantial results concerning the teaching and learning of mathematics at university level including the teaching and learning of specific topics in advanced mathematics across a wide range of university programmes

The Five Practices in Practice [High School] Margaret (Peg) Smith, Michael D. Steele, Miriam Gamoran Sherin, 2020-02-26

This book makes the five practices accessible for high school mathematics teachers. Teachers will see themselves and their classrooms throughout the book. High school mathematics departments and teams can use this book as a framework for engaging professional collaboration. I am particularly excited that this book situates the five practices as ambitious and equitable practices. Robert Q. Berry III, NCTM President 2018-2020. Samuel Braley Gray, Professor of Mathematics Education, University of Virginia. Take a deeper dive into understanding the five practices: anticipating, monitoring, selecting, sequencing, and connecting, for facilitating productive mathematical conversations in your high school classrooms and learn to apply them with confidence. This follows up to the modern classic *5 Practices for Orchestrating Productive Mathematics Discussions*, which shows the five practices in action in high school classrooms and empowers teachers to be prepared for and overcome the challenges common to orchestrating math discussions. The chapters unpack the five practices and guide teachers to a deeper understanding of how to use each practice effectively in an inquiry-oriented classroom. This book will help you launch meaningful mathematical discussion through key questions to set learning goals, identify high-level tasks, anticipate student responses, and develop targeted assessing and advancing questions that jumpstart productive discussion before class begins. Video excerpts from real high school classrooms vividly illustrate the five practices in action and include built-in opportunities for you to consider effective ways to monitor students' ideas and successful approaches for selecting, sequencing, and connecting students' ideas during instruction. Pause and Consider prompts that help you reflect on an issue and in some cases draw on your own classroom experience prior to reading more about it. Linking To Your Own Instruction sections help you implement the five practices with confidence in your own instruction. The book and companion website provide an array of resources, including planning templates, sample lesson plans, completed monitoring tools, and mathematical tasks. Enhance your fluency in the five practices to bring powerful discussions of mathematical concepts to life in your classroom.

Regression Analysis for the Social Sciences Rachel A. Gordon, 2015-03-17. Provides graduate students in the social sciences with the basic skills they need to estimate, interpret, present, and publish basic regression models using contemporary standards. Key features of the book include interweaving the teaching of statistical concepts with examples developed for the course from publicly available social science data or drawn from the literature; thorough integration of teaching statistical theory with teaching data processing and analysis; teaching of Stata and use of chapter exercises in which students practice programming and interpretation on the same data set. A separate set of exercises allows students to select a data set to apply the concepts learned in each chapter to a research question of interest to them. All updated for this edition.

Mathematics for Social Justice Catherine A. Buell,Bonnie Shulman,2021-11-18 Mathematics instructors are always looking for ways to engage students in meaningful and authentic tasks that utilize mathematics At the same time it is crucial for a democratic society to have a citizenry who can critically discriminate between fake and reliable news reports involving numeracy and apply numerical literacy to local and global issues This book contains examples of topics linking math and social justice and addresses both goals There is a broad range of mathematics used including statistical methods modeling calculus and basic algebra The range of social issues is also diverse including racial injustice mass incarceration income inequality and environmental justice There are lesson plans appropriate in many contexts service learning courses quantitative literacy reasoning courses introductory courses and classes for math majors What makes this book unique and timely is that the most previous curricula linking math and social justice have been treated from a humanist perspective This book is written by mathematicians for mathematics students Admittedly it can be intimidating for instructors trained in quantitative methods to venture into the arena of social dilemmas This volume provides encouragement support and a treasure trove of ideas to get you started The chapters in this book were originally published as a special issue of the journal
