Mathematical Literacy Paper February March 2012:

Mathematical Competencies in the Digital Era Uffe Thomas Jankvist, Eirini Geraniou, 2023-02-20 This book focuses on the potential interplay between two distinct yet related paradigm shifts in mathematics education drawing on the notion of networking of theories through illustrative case studies from the Danish educational system and beyond The first paradigm shift is the massive introduction of digital technology in the teaching and learning of the subject the second is a shift from the traditional focusing on mastering of skills and knowledge to being concerned with the possession and development of mathematical competencies This book builds on the Danish KOM Competencies and the Learning of Mathematics project which sources its description of mathematical mastery primarily on the notion of a mathematical competency rather than on lists of topics concepts and results This allows for an overarching framework which captures the perspectives of mathematics teaching and learning at whichever educational level While the KOM framework does not in detail address the role of digital technologies in relation to its description of different types of mathematical competencies etc the chapters of this book set out to do exactly this while in the process also drawing on a selection of other theoretical constructs and frameworks from mathematics education research Starting with introductory chapters by key researchers in the area the book brings forth chapters for each of the KOM framework s eight mathematical competencies authored by Nordic researchers in combination with international scholars The KOM framework also operates with three types of overview and judgement which are specifically addressed in relation to the role of digital technologies in the third part of the book The fourth and final part of the book broadens the scene and provides chapters of a more perspective nature in relation to mathematical competencies in the digital era The book s preface is by Susanne Prediger Encyclopedia of Information Science and Technology, Third Edition Khosrow-Pour, D.B.A., Mehdi, 2014-07-31 This 10 volume compilation of authoritative research based articles contributed by thousands of researchers and experts from all over the world emphasized modern issues and the presentation of potential opportunities prospective solutions and future directions in the field of information science and technology Provided by publisher Mathematics And Its Teaching In The Muslim World Bruce R Vogeli, Mohamed E A El Tom, 2020-06-25 This anthology reviews the history current states and plans for the development of mathematics education in the Muslim States in Africa the Middle East and Asia There is an introduction by Ahmed Djebbar the most prominent contemporary scholar of Muslim mathematics The chapters are written by respective national experts in mathematics PISA 2015 Assessment and Analytical Framework Science, Reading, Mathematic and Financial Literacy education OECD, 2016-04-19 What is important for citizens to know and be able to do The OECD Programme for International Student Assessment PISA seeks to answer that question through the most comprehensive and rigorous international assessment of student knowledge and skills Large-class Pedagogy David J.
