

A **transformation** is an operation that maps, or moves, a pre-image onto an image. In each transformation defined below, it is assumed that all points and figures are in one plane. In each case, $\triangle ABC$ is the pre-image and $\triangle A'B'C'$ is the image.

A **translation** maps every two points P and Q to points P' and Q' so that the following properties are true:

- $PP' = QQ'$
- $\overline{PP'} \parallel \overline{QQ'}$

A **reflection** across a line m maps every point R to R' so that the following properties are true:

- If R is not on m , then m is the perpendicular bisector of $\overline{RR'}$.
- If R is on m , then R and R' are the same point.

A **rotation** of x° about a point Q maps every point S to S' so that the following properties are true:

- $SQ = S'Q$ and $m\angle SQS' = x^\circ$.
- Pre-image point Q and image point Q' are the same.

Note: $\overline{QS}$ and $\overline{QS'}$ are radii of a circle with center Q .
