 Patnaik,2009-02-24 The authors have consolidated their research work in this volume titled Soft Computing for Data Mining
 Applications The monograph gives an insight into the research in the elds of Data Mining in combination with Soft
 Computing methodologies In these days the data continues to grow ponentially Much of the data is implicitly or explicitly
 imprecise Database discovery seeks to discover noteworthy unrecognized associations between the data items in the existing
 database The potential of discovery comes from the realization that alternate contexts may reveal additional valuable
 information The rate at which the data is storedis growing at a phenomenal rate As a result
 traditional adhoc mixtures of statistical techniques and data management tools are no longer adequate for analyzing this vast
 collection of data Several domains where large volumes of data are stored in centralized or
 distributed databases include applications like electronic commerce bio formatics computer security Web intelligence
 intelligent learning database systems nance marketing healthcare telecommunications and other elds Efficient tools and
 algorithms for knowledge discovery in large data sets have been devised during the recent years These methods exploit the
 capability of computers to search huge amounts of data in a fast and effective manner However the data to be analyzed is
 imprecise and affected with certainty In the case of heterogeneous data sources such as text and video the data might
 moreover be ambiguous and partly conflicting Besides patterns and relationships of interest are usually approximate Thus in
 order to make the information mining process more robust it requires tolerance toward imprecision uncertainty and
 exceptions
