Fostering Integrity in Research National Academies of Sciences, Engineering, and Medicine, Policy and Global Affairs, Committee on Science, Engineering, Medicine, and Public Policy, Committee on Responsible Science, 2018-01-13 The integrity of knowledge that emerges from research is based on individual and collective adherence to core values of objectivity honesty openness fairness accountability and stewardship Integrity in science means that the organizations in which research is conducted encourage those involved to exemplify these values in every step of the research process Understanding the dynamics that support or distort practices that uphold the integrity of research by all participants ensures that the research enterprise advances knowledge The 1992 report Responsible Science Ensuring the Integrity of the Research Process evaluated issues related to scientific responsibility and the conduct of research It provided a valuable service in describing and analyzing a very complicated set of issues and has served as a crucial basis for thinking about research integrity for more than two decades However as experience has accumulated with various forms of research misconduct detrimental research practices and other forms of misconduct as subsequent empirical research has revealed more about the nature of scientific misconduct and because technological and social changes have altered the environment in which science is conducted it is clear that the framework established more than two decades ago needs to be updated Responsible Science served as a valuable benchmark to set the context for this most recent analysis and to help guide the committee s thought process Fostering Integrity in Research identifies best practices in research and recommends practical options for discouraging and addressing research misconduct and detrimental research practices *The United States Government Manual* , 2013 **The Report: Ghana 2012** , 2012 **Educating Scientists and Engineers for Academic and Non-Academic Career Success** James Speight, 2014-12-10 In an increasingly technological world the education of scientists and engineers has become an activity of growing importance Educating Scientists and Engineers for Academic and Non Academic Career Success focuses on the structure of the current educational system and describes the transformations

needed to ensure the adequate education of future work in neuroscience and an incisive corrective to a long history of damaging pseudo science finally debunking the myth that there is a biological distinction between male and female brains For decades if not centuries science has backed up society's simple dictum that men and women are hardwired differently that the world is divided by two different kinds of brains male and female However new research in neuroimaging suggests that this is little more than neurotrash In this powerfully argued work acclaimed professor of neuroimaging Gina Rippon finally challenges this damaging myth by showing how the science community has engendered bias and stereotype by rewarding studies that show difference rather than sameness Drawing on cutting edge research in neuroscience and psychology Rippon presents the latest evidence which finally proves that brains are like mosaics comprised of both male and female components and that they remain plastic adapting throughout the course of a person's life Discernable gender identities she asserts are shaped by society where scientific misconceptions continue to be wielded and perpetuated to the detriment of our children our own lives and our culture
