## Student Exploration: Dichotomous Keys

**Vocabulary:** define in complete sentences: dichotomous key, genus, organism, scientific name, species, traits

**Prior Knowledge Question** (Do this **BEFORE** using the Gizmo.)

Jerome is walking through a park when he sees the spider shown at left. How could Jerome find out what type of spider it is?

---

---

---

### Gizmo Warm-up

In the field, scientists often have to identify an unfamiliar organism (living thing). A reliable way to identify organisms is to use a **dichotomous key**. A dichotomous key is a series of paired statements or questions that lead to the identification of an organism.

The Dichotomous Keys Gizmo™ allows you to use five different dichotomous keys to identify a variety of organisms. To begin, make sure **California Albatrosses** and **Organism A** are selected.

1. Read the two statements at lower right. Which of the two statements most closely matches the characteristics of the bird pictured?

---

2. Select that statement and click **Next**. Continue until you have correctly identified the albatross. If you change your mind about a choice, you can click the **Back** button. If you incorrectly identify the albatross, you can click the **Start Over** button and try again.

- A. What is the name of the albatross? \_\_\_\_\_
- B. The **scientific name** is shown in **italics**. Scientific names have two parts: the **genus** name and the **species** name. What is the scientific name of this albatross?
